Columbia College

Please remember to include your name and student number.

You are required to utilise basic HTML to write a small webpage containing your answer to the following questions. For a sufficient tutorial on how to do so, I recommend: <https://www.w3schools.com/html/default.asp>

You must make sufficient effort to ensure the submitted webpage is properly formatted. Failure to comply will result in a ZERO grade. Your submission must be a zip file with the following file structure:

```
answer.zip
  img/
    # all of your images should be here in this
    # folder
  index.html
```

Lab 2

Create an HTML File

In your text editor, create an HTML file named `index.html`. You will need to write about the following subjects.

1. Write down the definition of memes, and look up `` tag in [HTML references](#). Create your own meme in the form of an image, then add it to your webpage using ``.
2. Look up `<a>` tag. Provide links to 3 AI image generation websites. These should be websites where you can generate images by providing textual descriptions.
 1. Compare the performances of these 3 image generation services by attaching images of "a tuxedo cat with a machine gun on a luxury yacht."
3. Each above 2 questions' answers should be enclosed in a `<section>` tag.

Grading criteria

- Grading will be performed based on 2 factors:
 1. The quality of your writing. If you've invested enough effort, you will be rewarded with a decent grade. Make it interesting, try to learn something new from your own research.
 2. Proper HTML formatting as per requirements above.
