Introduction to Digital and Computer System Design

Lecture 1: Digital Information Representations II

Jetic Gū

Overview

- Focus: Number Systems
- Architecture: Digital Circuits
- Textbook v4: Ch1 1.3, 1.4; v5: Ch1 1.4, 1.5
- Core Ideas:
 1. Digital Number Systems
 2. Arithmetic Operations, Ranges
 3. Digital & Analog Conversion

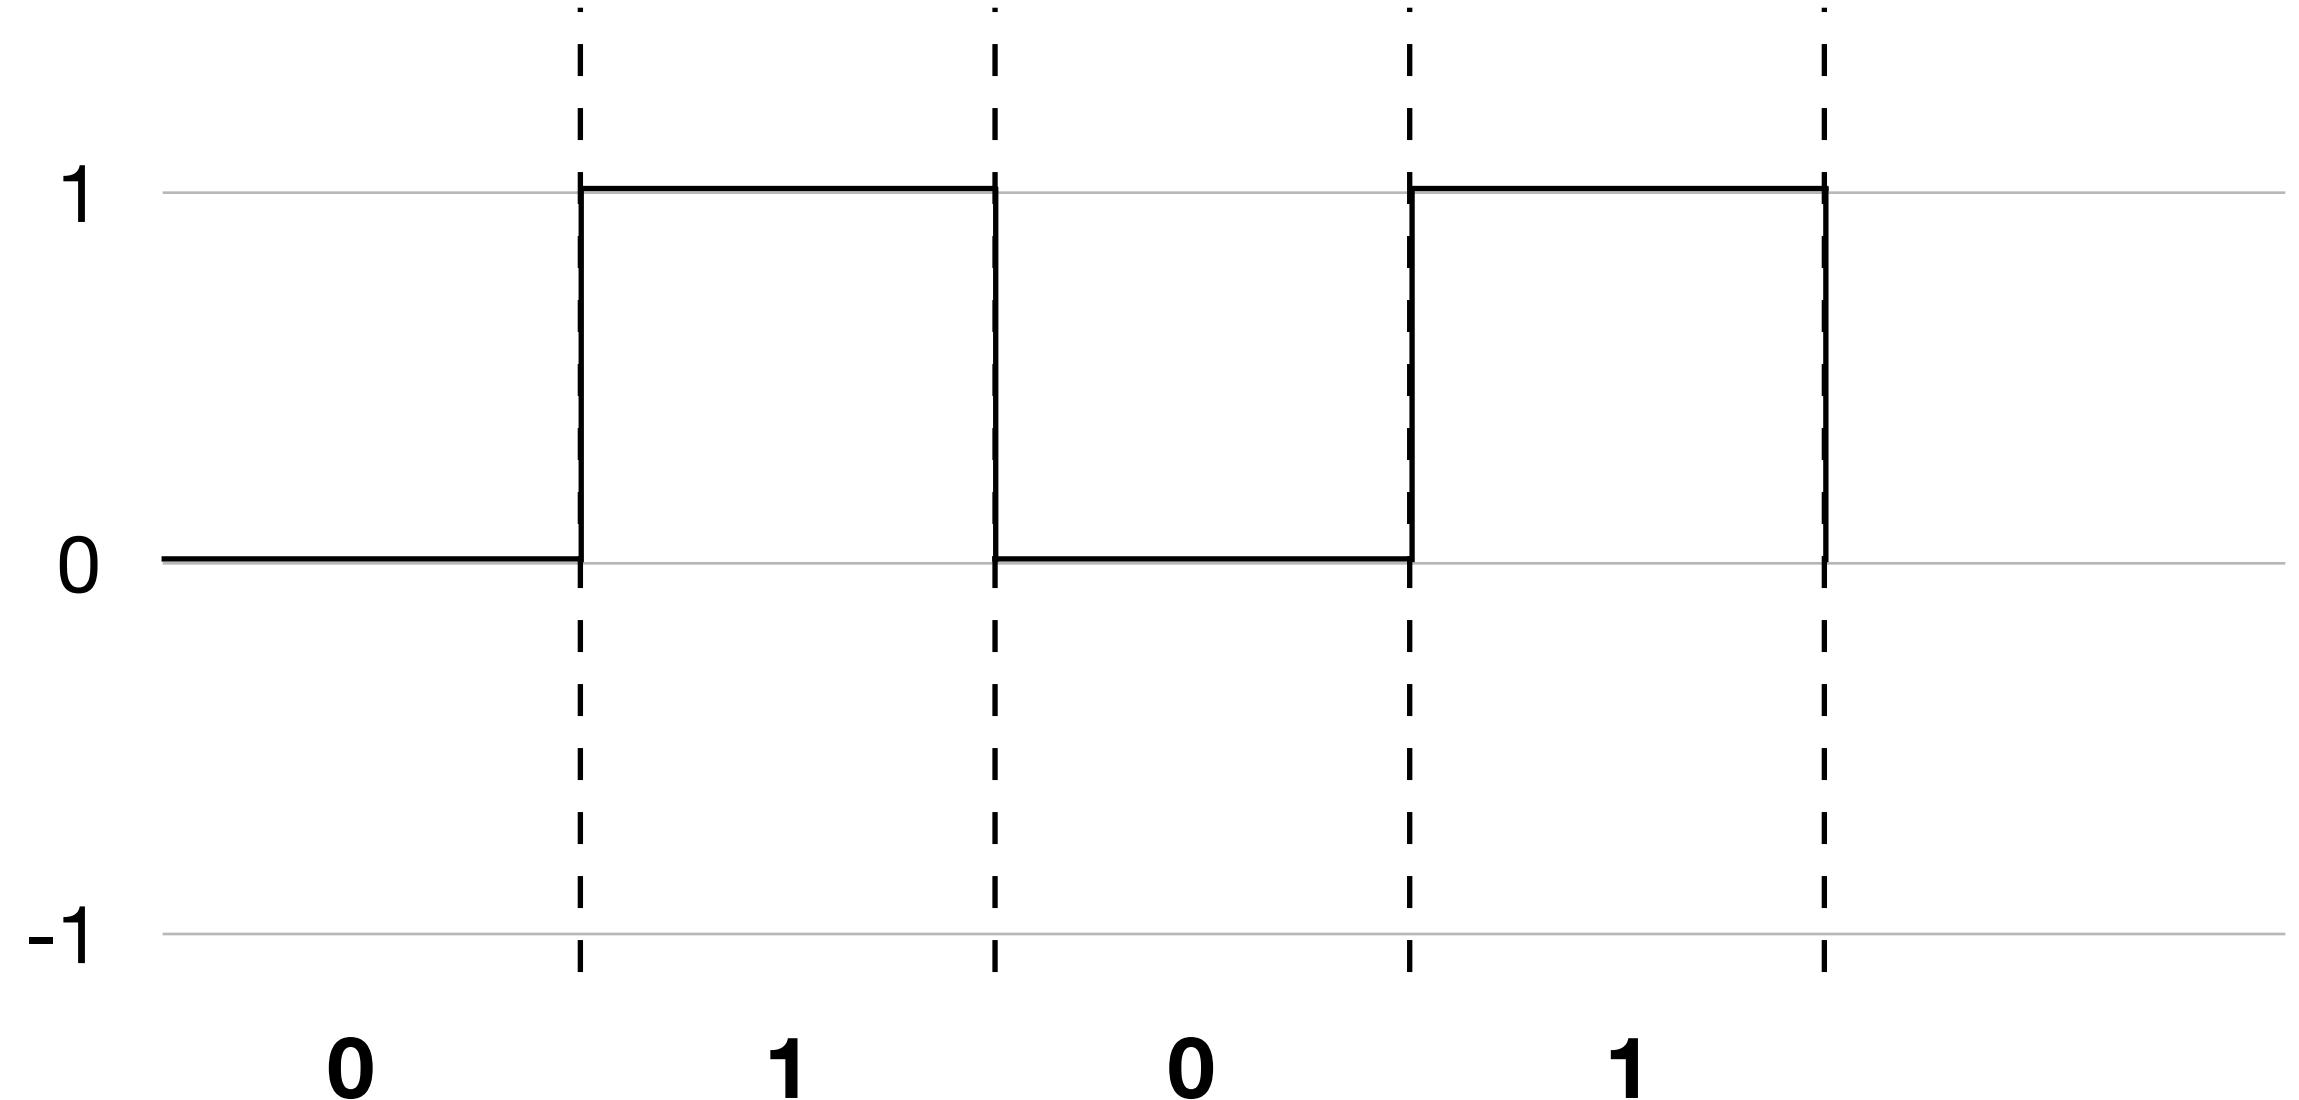

Digital and Analog Circuits

- In Digital Circuits, information are represented by discrete values, usually 0/1s defined by HIGH/LOW voltages ranges
- In Analog Circuits, information representation is continuous
- Von Neumann computers: all-purpose design
 - CPU (control unit and functional/datapath unit), IO, memory
- Embedded systems: specific functions only, compact and robust

Digital Number Systems

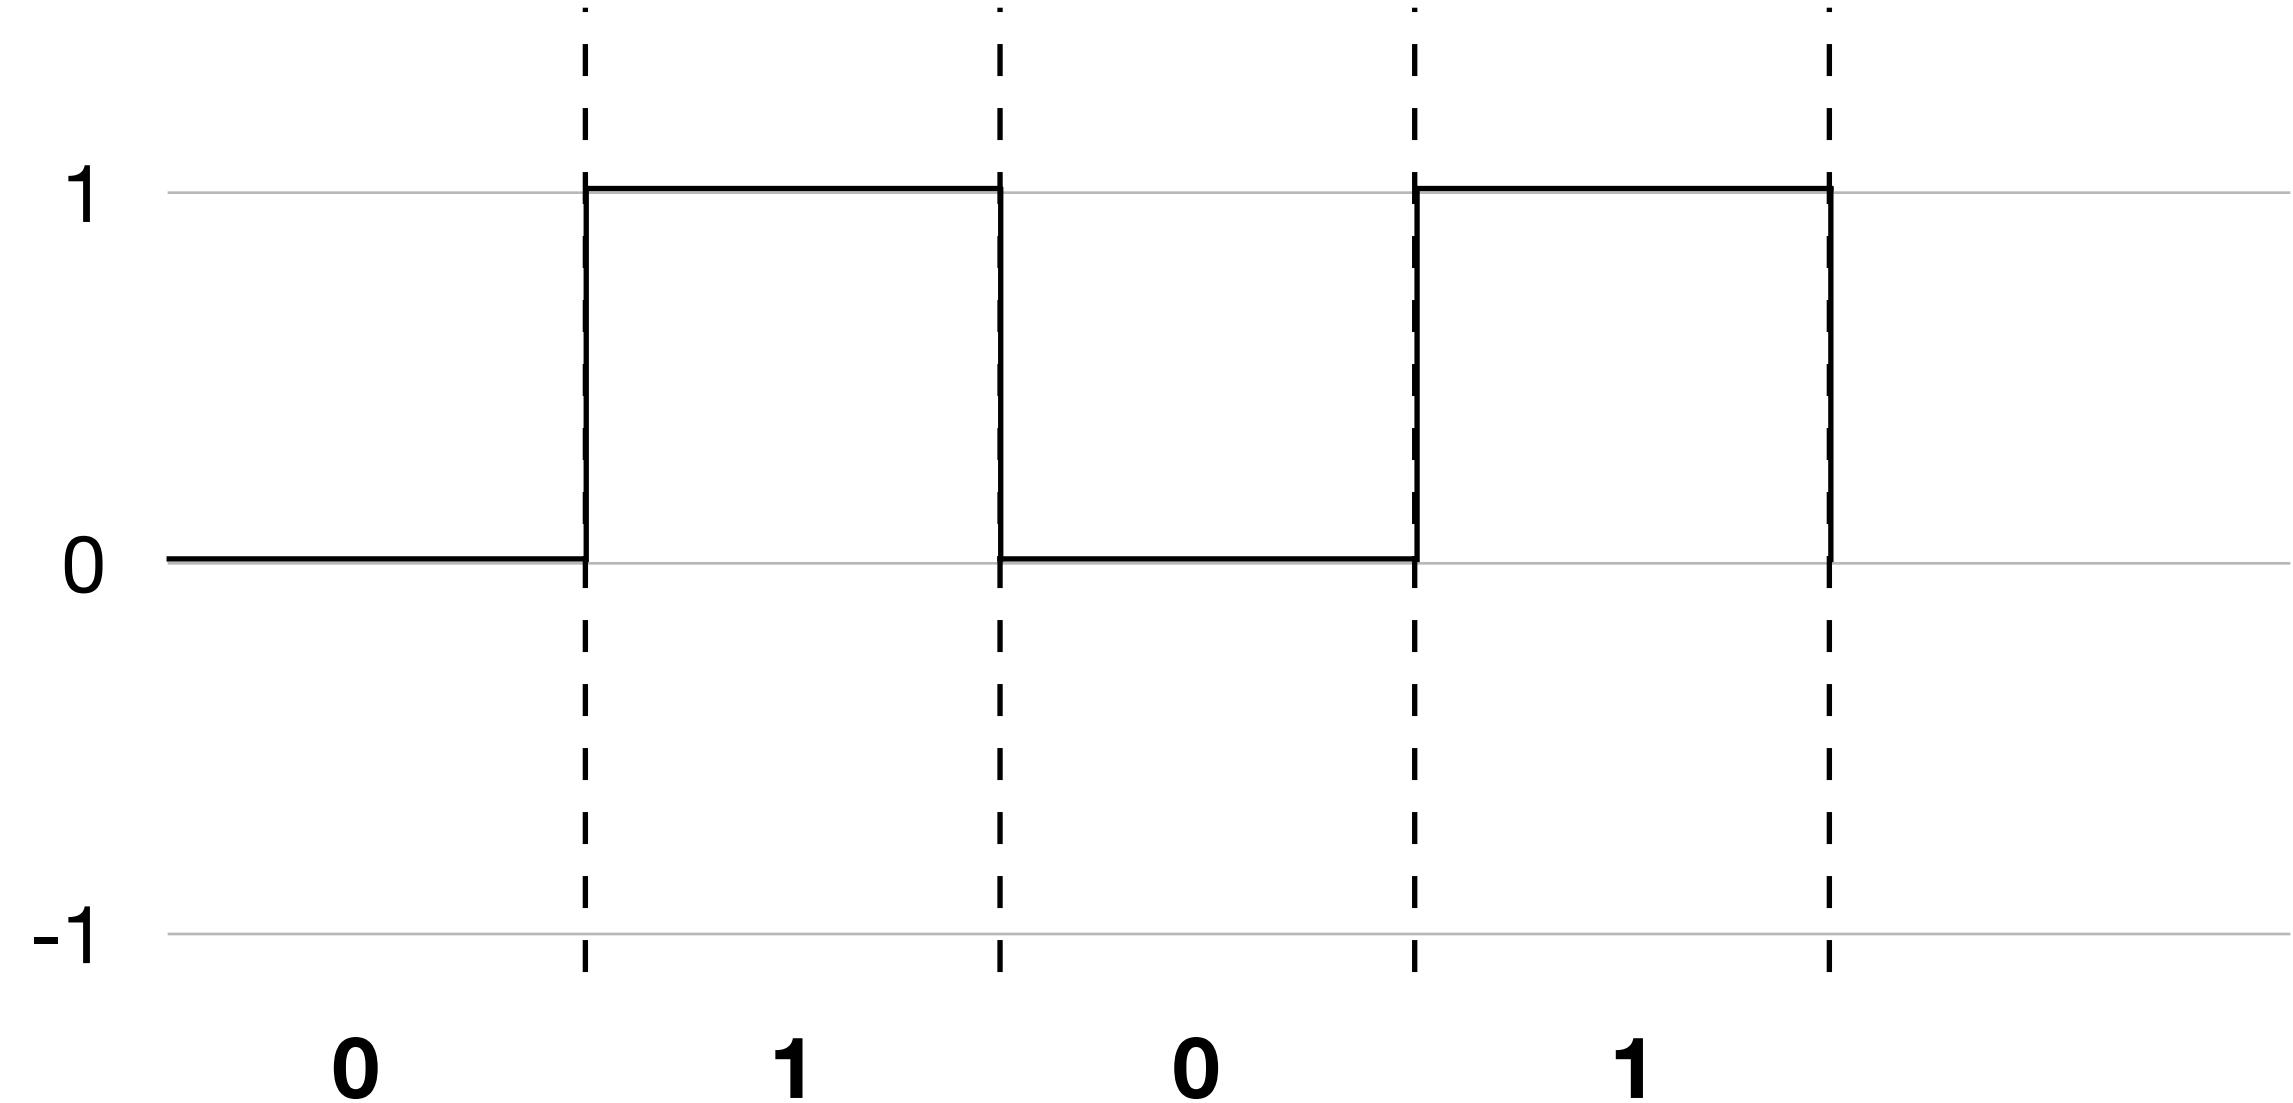

Binary, Octal and Hexadecimal Numbers;
Number Ranges

Binary System

- Base 2 system
- A number is represented with a string of 1s and 0s, each called a *bit*
- $(0101)_2 = 5$

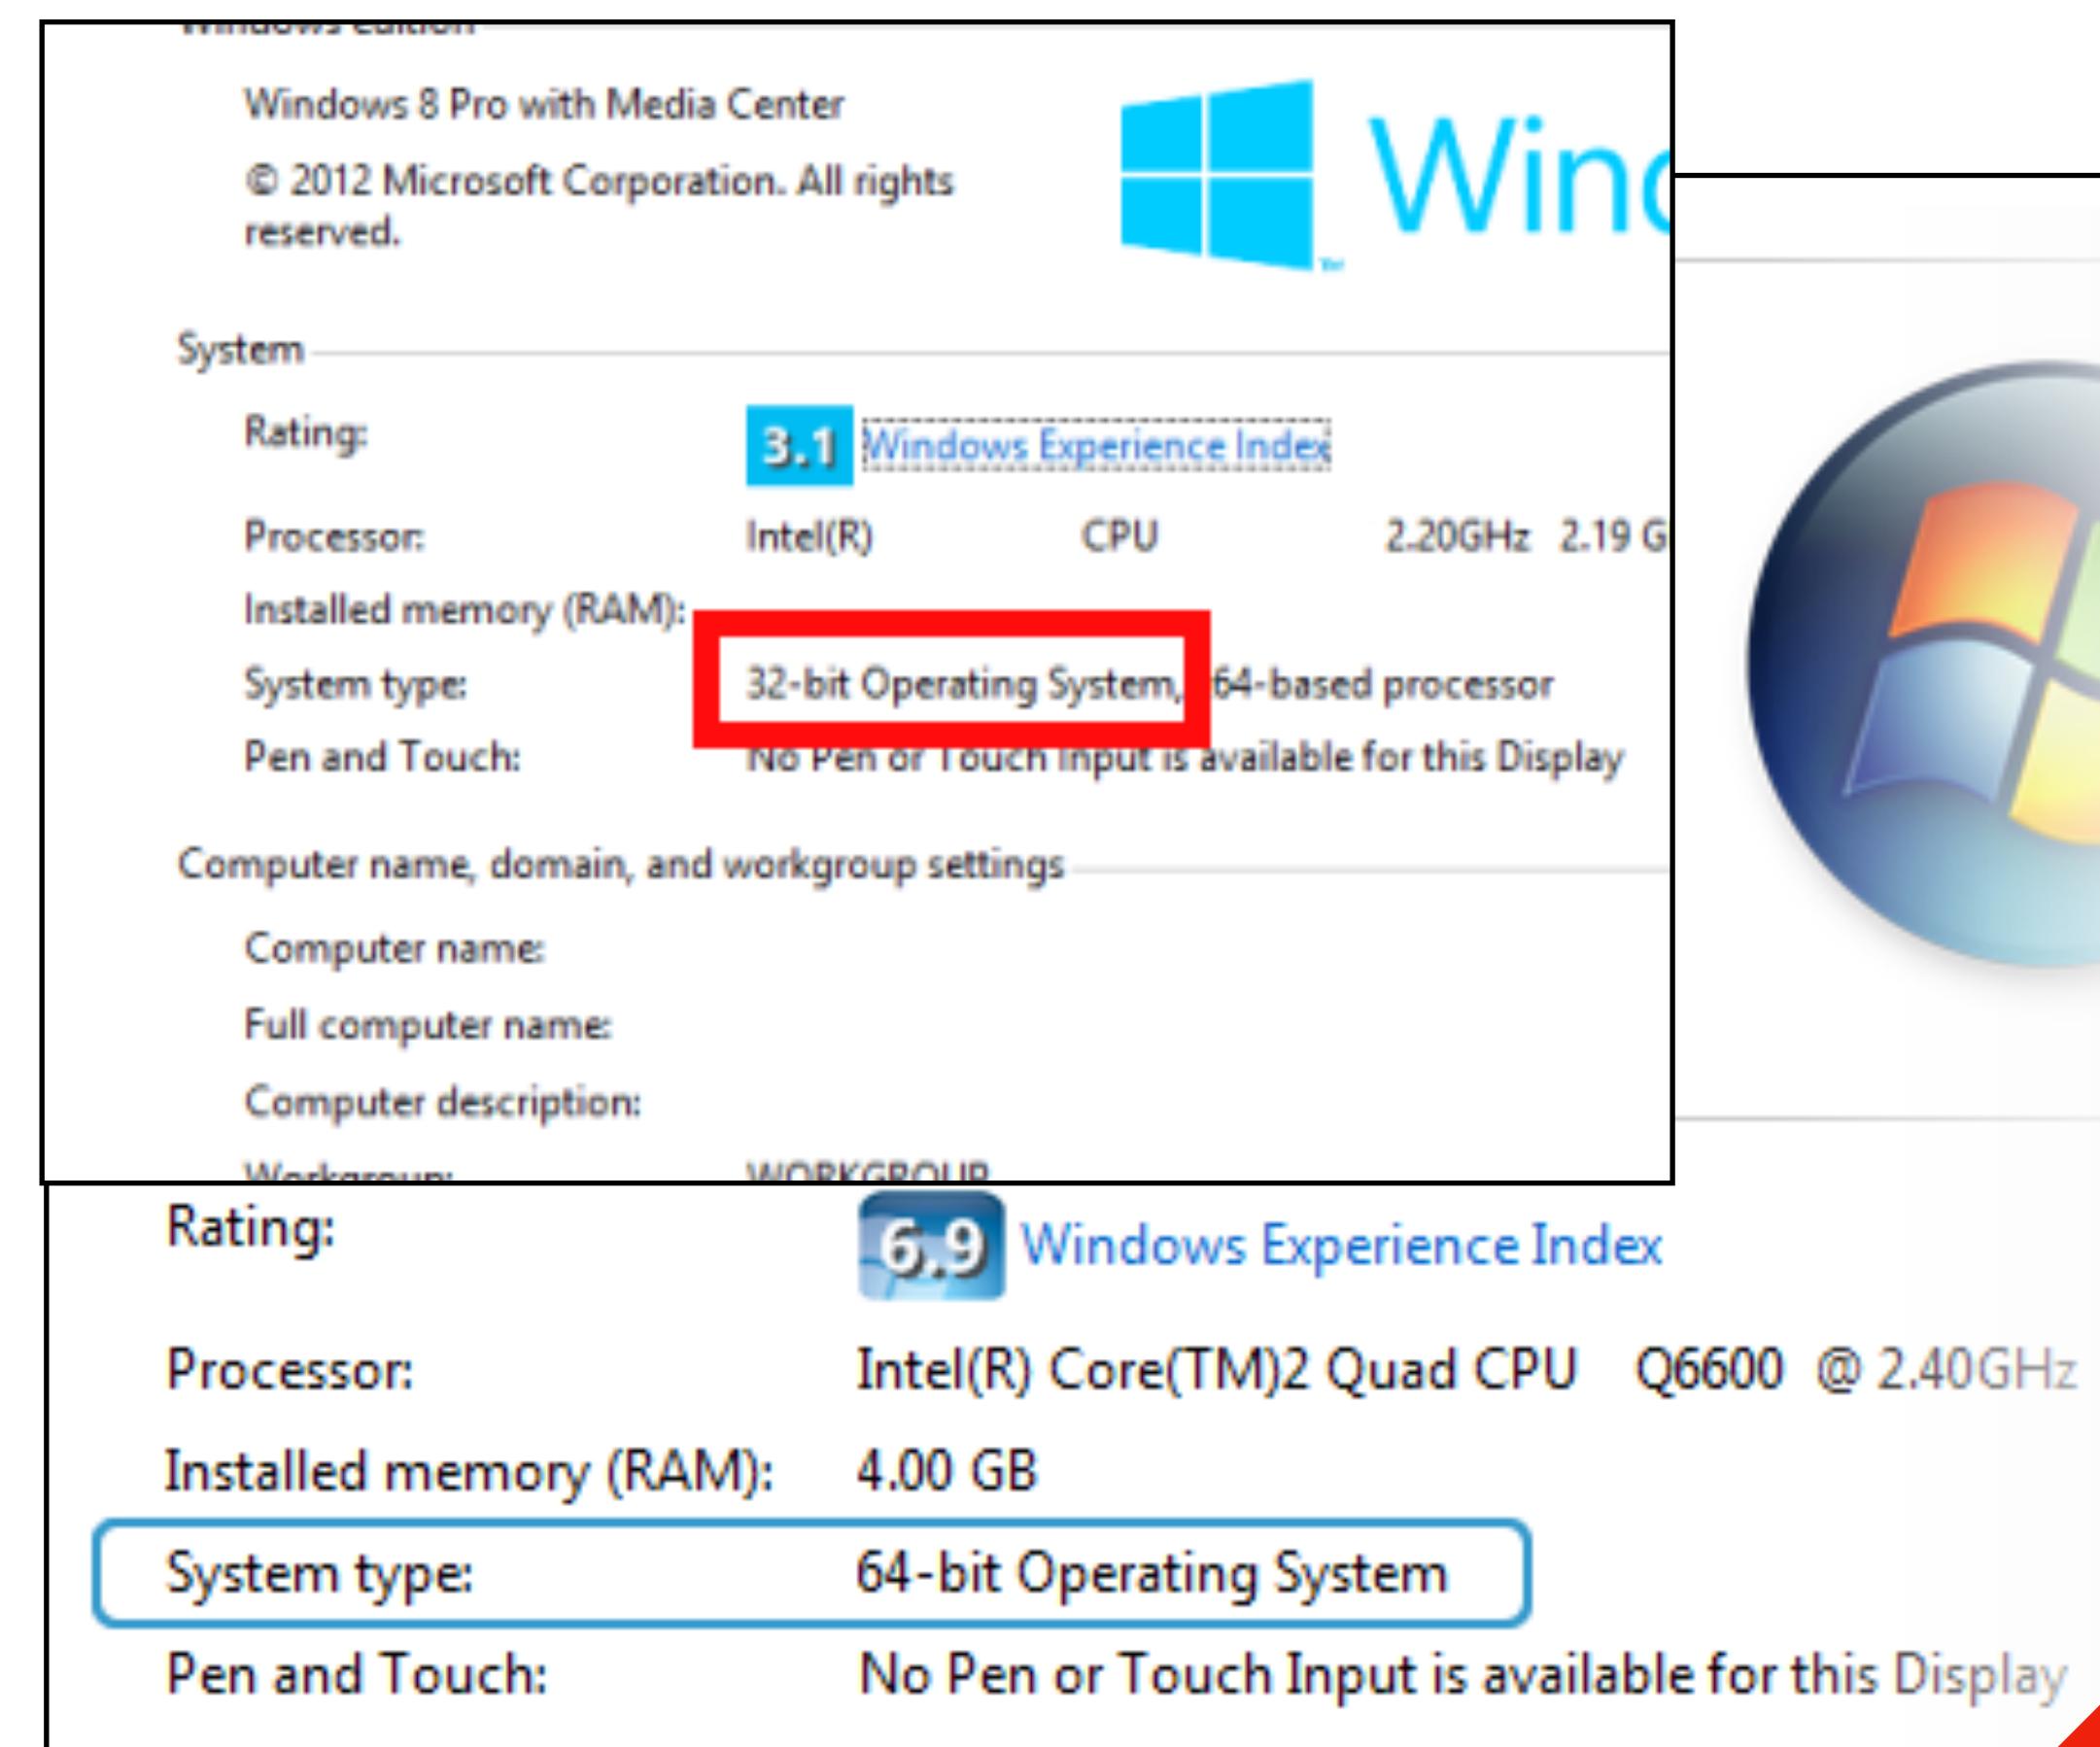

Binary System

- Is it possible to use different bases in a digital circuit?
- If it is possible, why haven't we seen it very often?

Binary Systems in Computers

- Every 8bit is called a Byte
- 32bit OS
 - A single number is represented by 32bits
 - Range (int): 0 - 4,294,967,295
- OS vs Processor?
 - Compatibility mode

Concept

Binary Systems in Computers

- Every 8bit is called a Byte
- $1,024 = 2^{10}$ is called K (Kilo)
- $1,024 \times 1,024 = 2^{20}$ is called M (Mega)
- $1,024 \times 1,024 \times 1,024 = 2^{30}$ is called G (Giga)
- Tera, Peta, Exa, Zetta, Yotta

Binary Systems in Computers

- What is the difference between MBps and Mbps?
 - MegaBytes per second vs MegaBits per second
 - 8x difference!

Concept

Octal and Hexadecimal Systems

- Octal: base 8
 - digits: 0-7
- Hexadecimal: base 16
 - digits: 0-9, A-F (10-15)

Octal and Hexadecimal Systems

Decimal (Base 10)	Binary (Base 2)	Octal (Base 8)	Hexadecimal (Base 16)
00	0000	00	0
01	0001	01	1
02	0010	02	2
03	0011	03	3
04	0100	04	4
05	0101	05	5
06	0110	06	6
07	0111	07	7
08	1000	10	8
09	1001	11	9
10	1010	12	A
11	1011	13	B
12	1100	14	C
13	1101	15	D
14	1110	16	E
15	1111	17	F

Summary

- Digital binary systems
- Octal and Hexadecimal systems

Arithmetic Operations

Additions, Subtractions, Conversions

Arithmetics

- The same as decimal (mostly)
-

$$\begin{array}{r} 0010 \\ + 0011 \\ \hline 0101 \end{array} \qquad \begin{array}{r} 0101 \\ - 0011 \\ \hline 0010 \end{array}$$

Example (binary)

Arithmetics

Binary additions and subtractions

Carries

Augend

01101

Addend

+00101

Sum

Demo

Arithmetics

Binary additions and subtractions

Carries	11010	Borrows	
Augend	01101	Minuend	10110
Addend	+00101	Subtrahend	-10011
Sum	10010	Difference	

Arithmetics

OCTAL Multiplication

$$\begin{array}{r} 762 \\ \times \quad 54 \\ \hline 4672 \\ 3710 \\ \hline 43772 \end{array}$$

$$5 \times 2 = 12$$

$$5 \times 6 + 1 = 37$$

$$5 \times 7 + 3 = 46$$

...

Arithmetics

OCTAL Multiplication

Octal

$$\begin{array}{r} 762 \\ \times \quad 54 \\ \hline 4672 \\ 3710 \\ \hline 43772 \end{array}$$

Octal

$$\begin{aligned} 5 \times 2 &= 12 \\ 5 \times 6 + 1 &= 37 \\ 5 \times 7 + 3 &= 46 \\ \dots & \end{aligned}$$

Decimal

$$\begin{aligned} 10 &= (12)_8 \\ 31 &= (37)_8 \\ 38 &= (46)_8 \\ \dots & \end{aligned}$$

Arithmetics

$$41 \div 2 = 20 \text{ mod } 1$$

$$20 \div 2 = 10 \text{ mod } 0$$

$$10 \div 2 = 5 \text{ mod } 0$$

$$5 \div 2 = 2 \text{ mod } 1$$

$$2 \div 2 = 1 \text{ mod } 0$$

$$1 \div 2 = 0 \text{ mod } 1$$

Convert 41 to binary

Least significant
digit

Most significant
digit

$$41 = (101001)_2$$

Arithmetics

Convert 0.6875 to binary

$$0.6875 \times 2 = 1 + 0.3750$$

Most significant
digit

$$0.3750 \times 2 = 0 + 0.7500$$

$$0.7500 \times 2 = 1 + 0.5000$$

$$0.5000 \times 2 = 1 + 0.0000$$

Least significant
digit

0.6875 = (1011)

Signed Integers

- Integers in digital circuits have limited bits
 - e.g. 8bit for every number
 - How do we represent negative values in digital circuits?

$$\begin{array}{r} 000000101 \\ - 00001011 \\ \hline 0000???? \end{array}$$

(binary, 8bit, unsigned)

Signed & Unsigned Integers

- Unsigned 8bit:

- $(11111111)_2 = 255$

- Signed 8bit (only in digital circuits):

- 127 -> '01111111'
 - -127 -> '11111111'

First digit:

- 0 for positive
- 1 for negative

10001111

(binary, 8bit, signed)

Signed & Unsigned Integers

- Unsigned 8bit integer: 0 - 255
- Signed 8bit integer: -128 - 127
- Unsigned 32bit integer: 0 - 4,294,967,295
- Signed 32bit integer: -2,147,483,648 - 2,147,483,647
- Unless otherwise specified, treat as unsigned

Summary

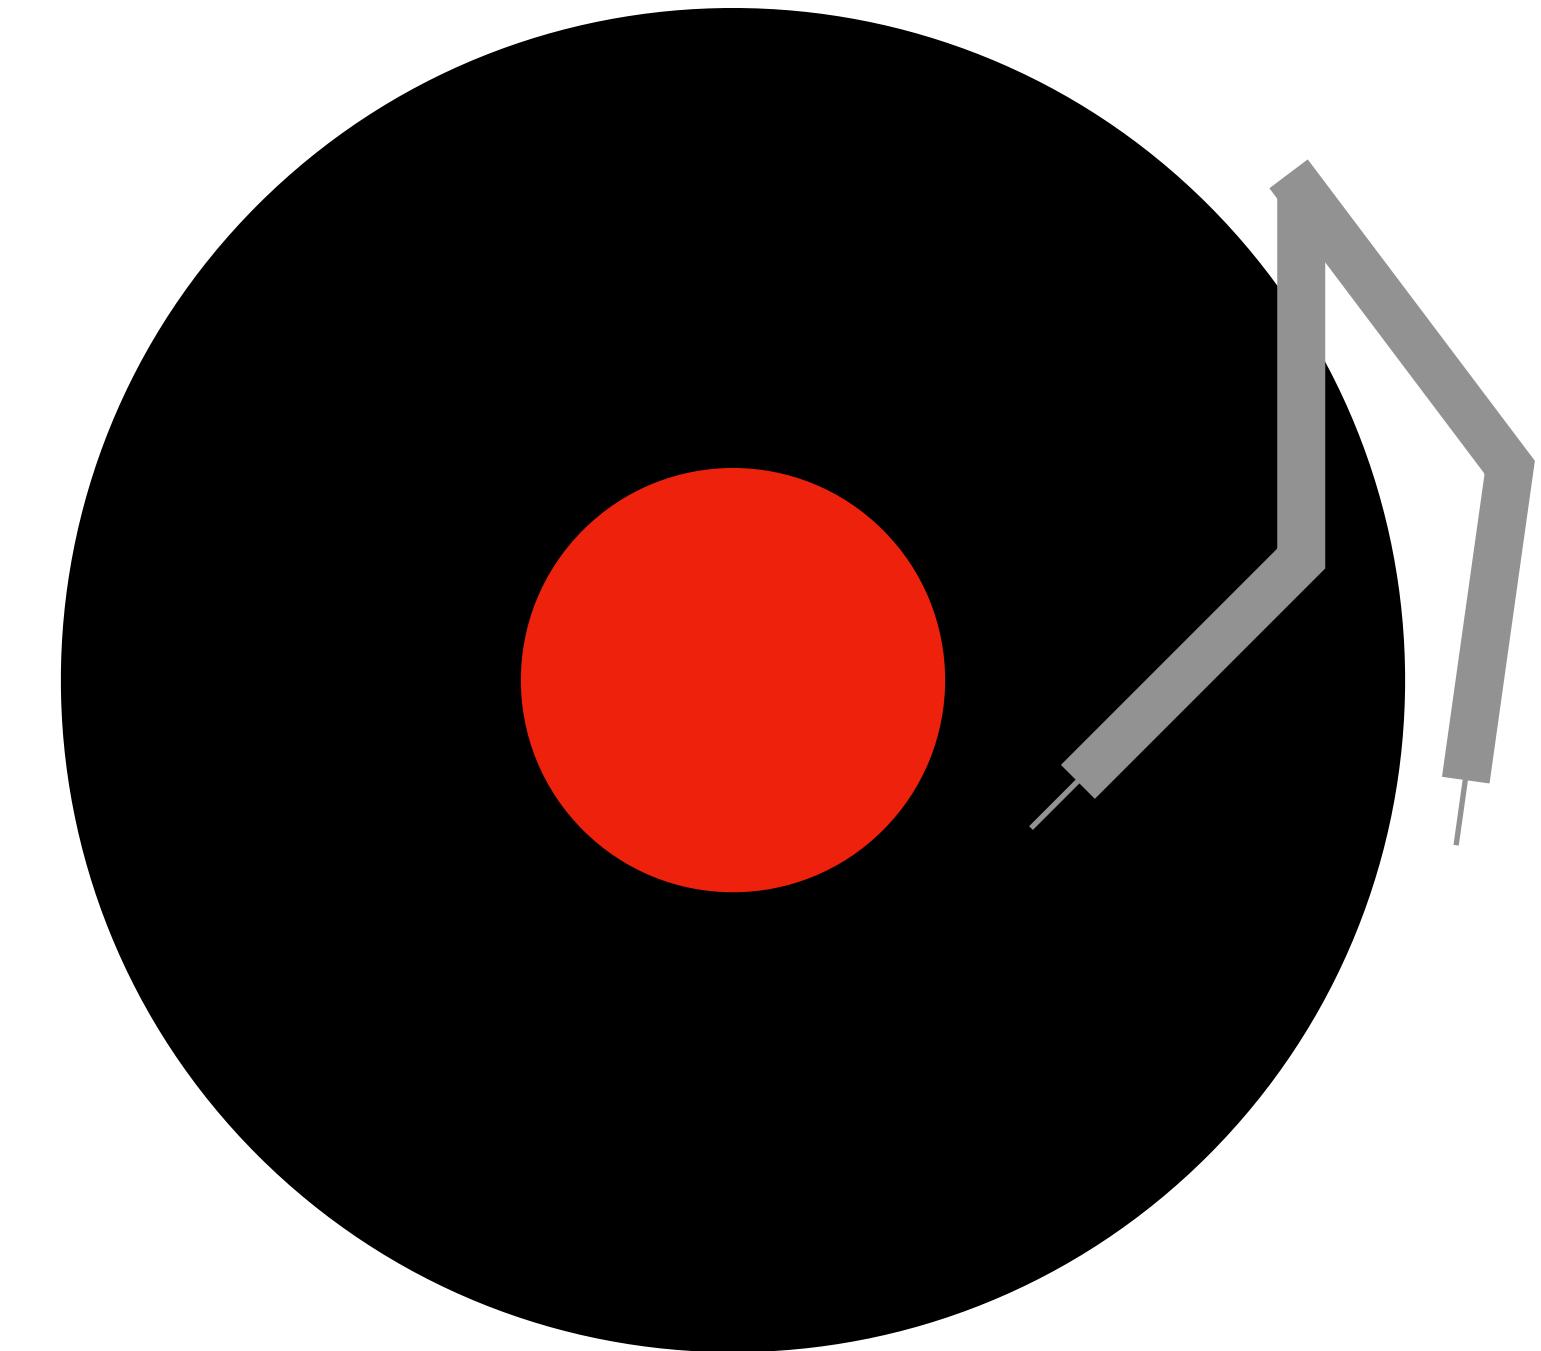

- Additions, Subtractions, Multiplications in Binary, Octal, Hexadecimal systems

Digital & Analog Conversions

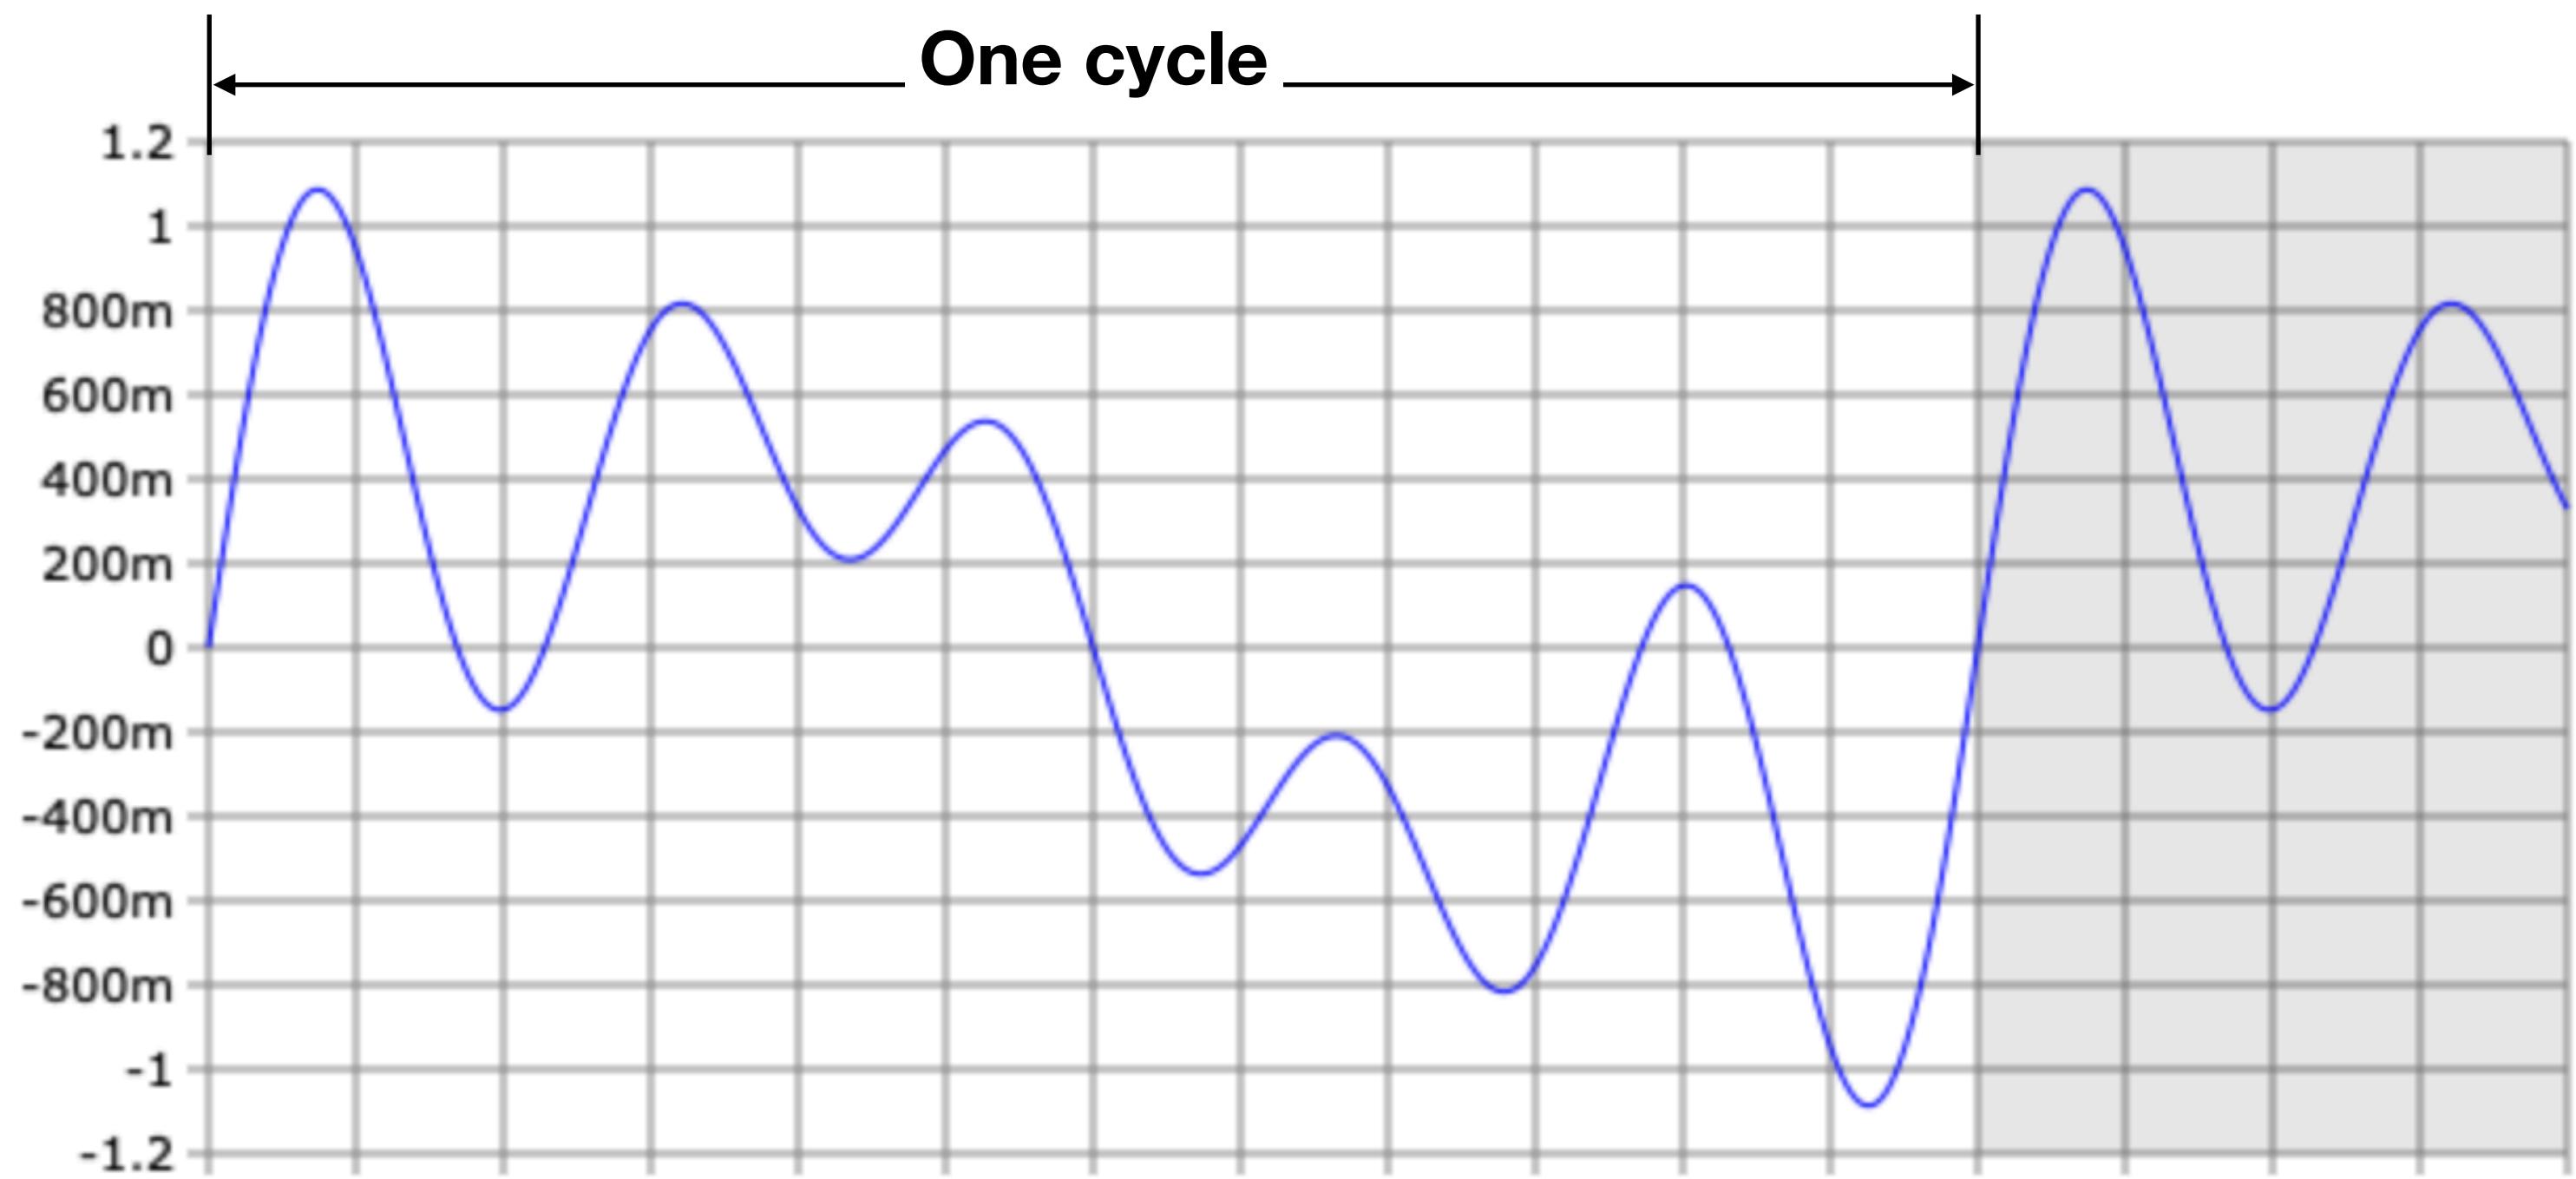

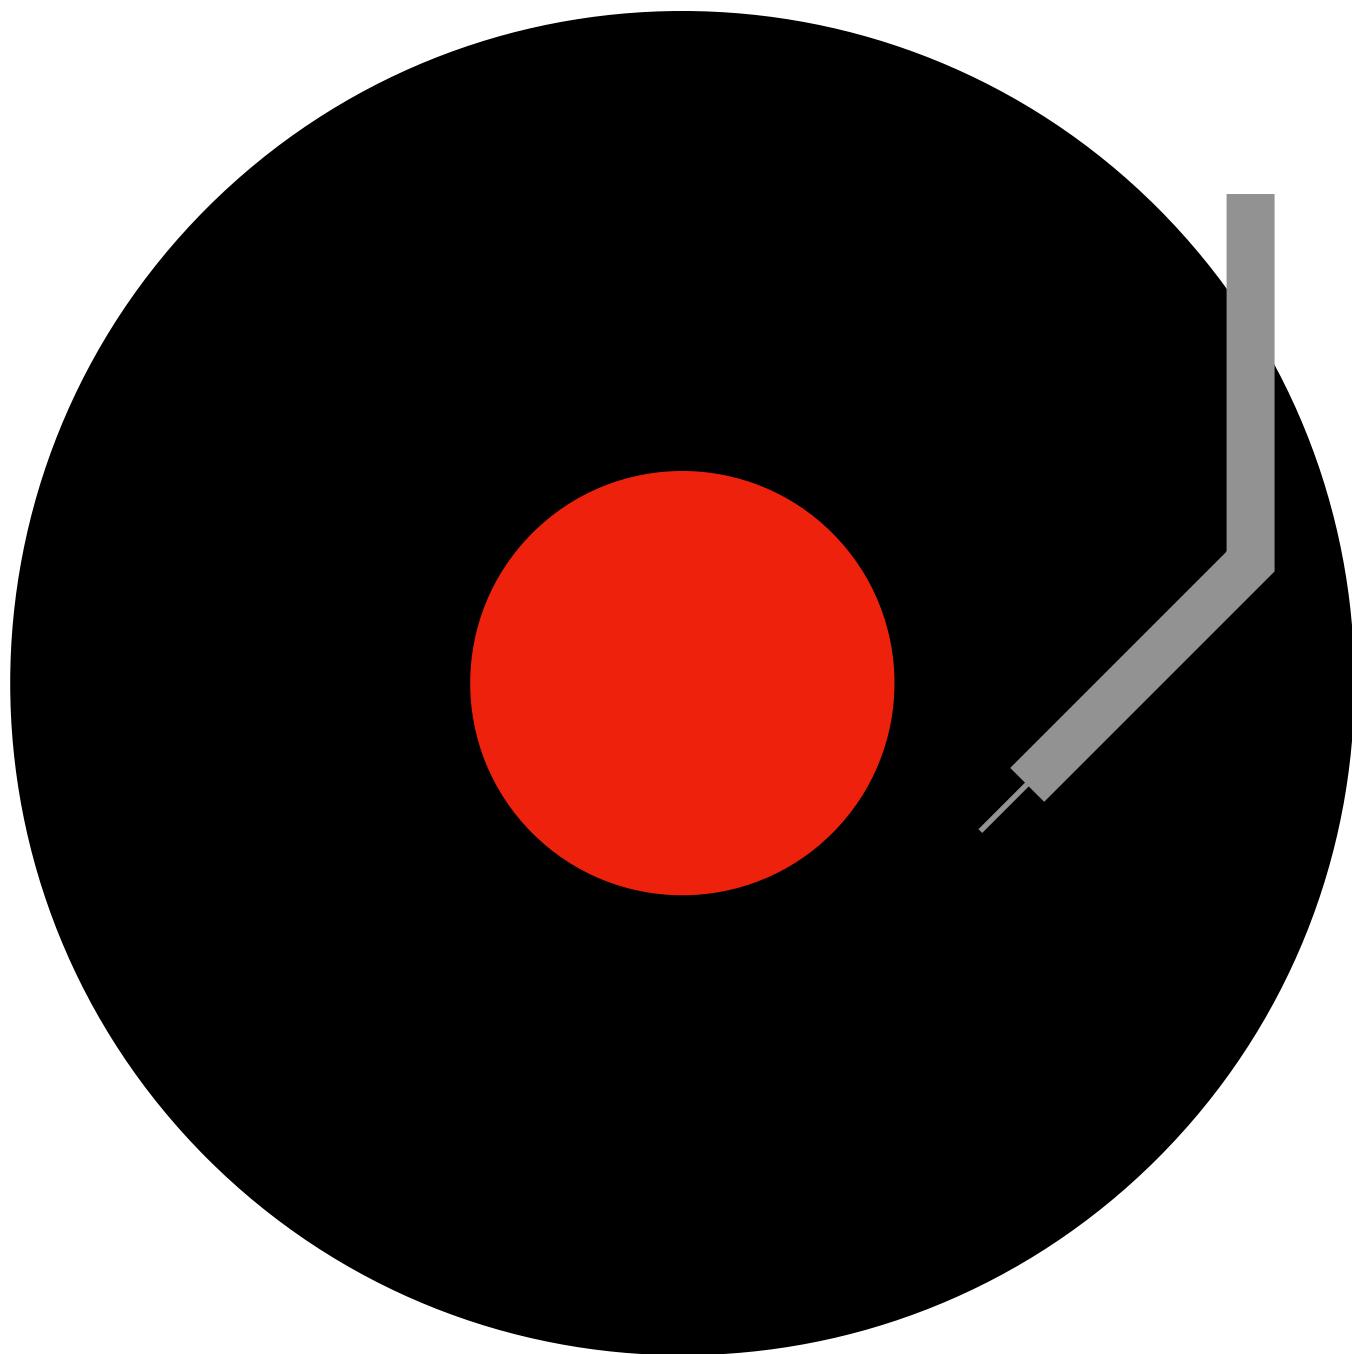

Demonstration

WARNING: inbound signed Binary/Hexadecimal operations

Case Study: Audio Signal Representation

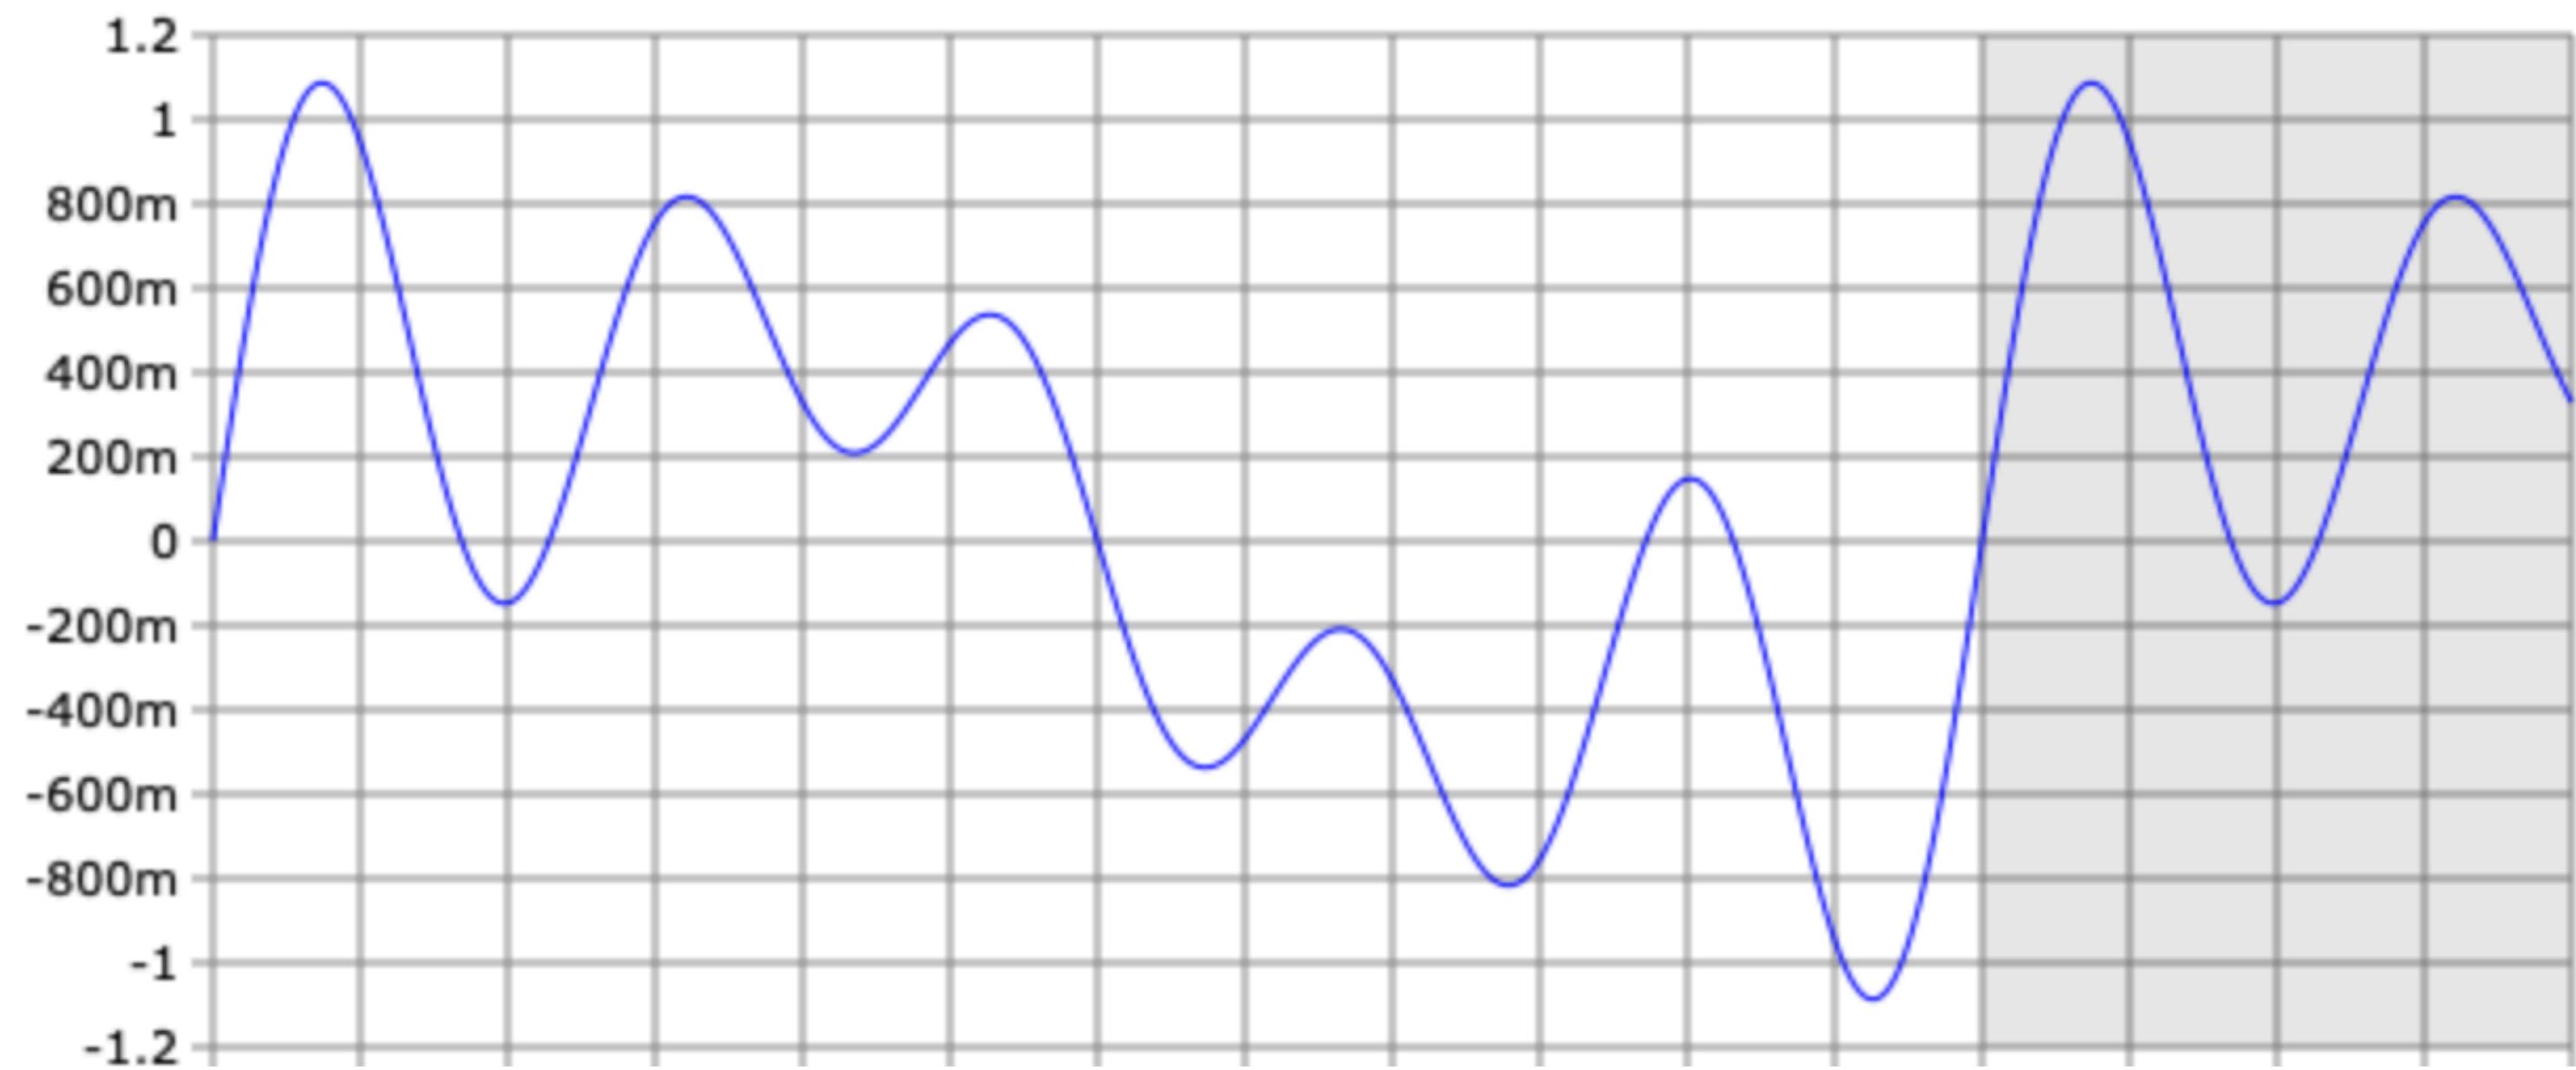

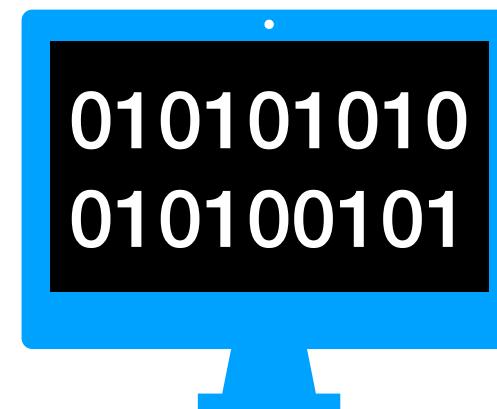

Case Study: Audio Signal Representation

440 Hz = 440 cycles per sec

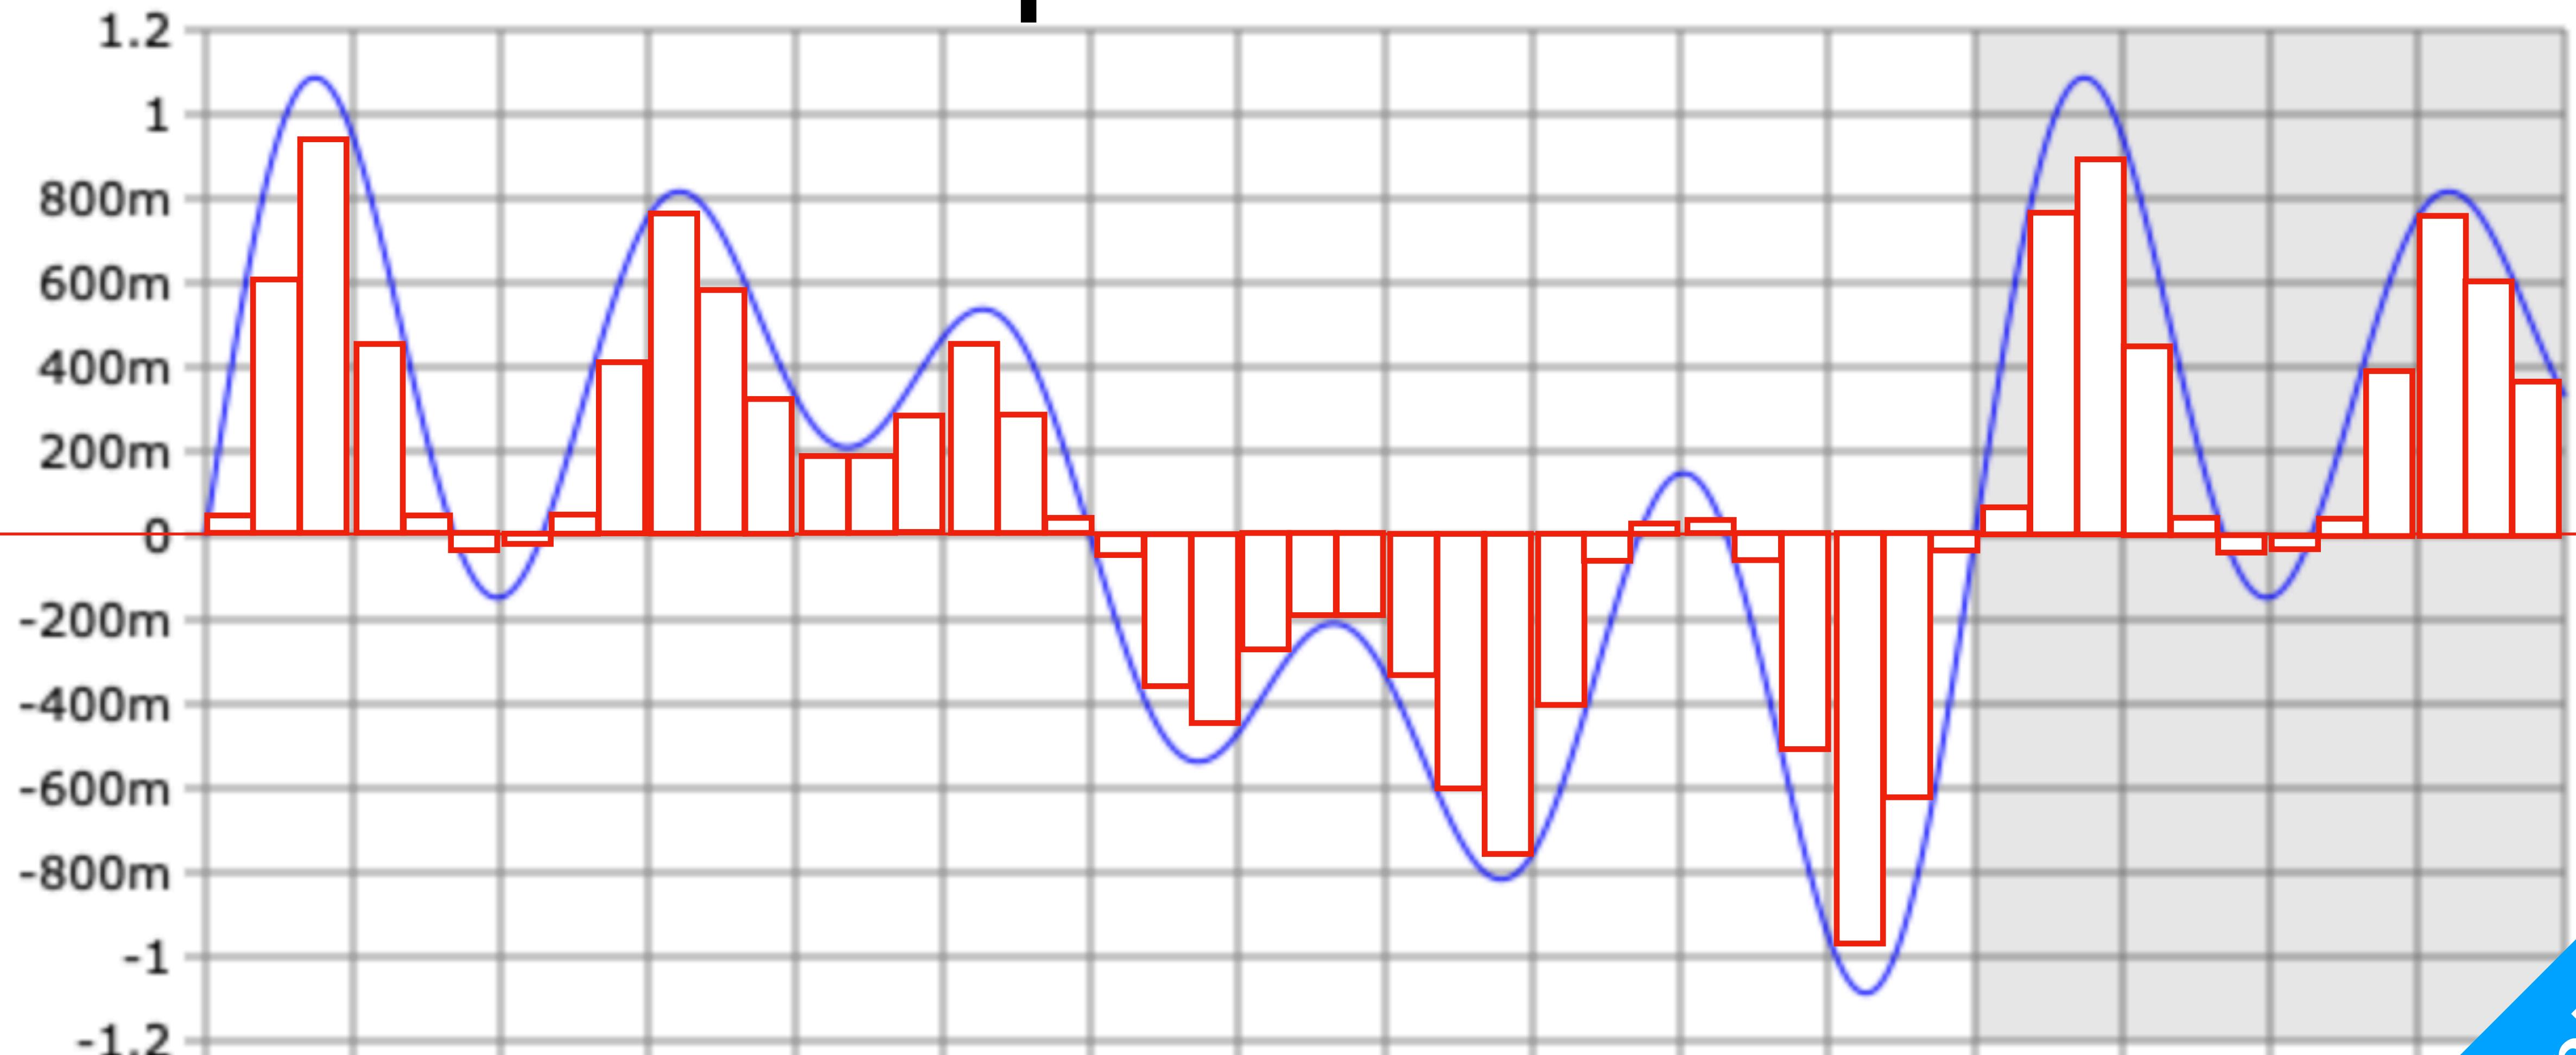

Case Study: Audio Signal Representation

440 Hz = 440 cycles per sec

Case Study: Audio Signal Representation

P3
DA Conversion

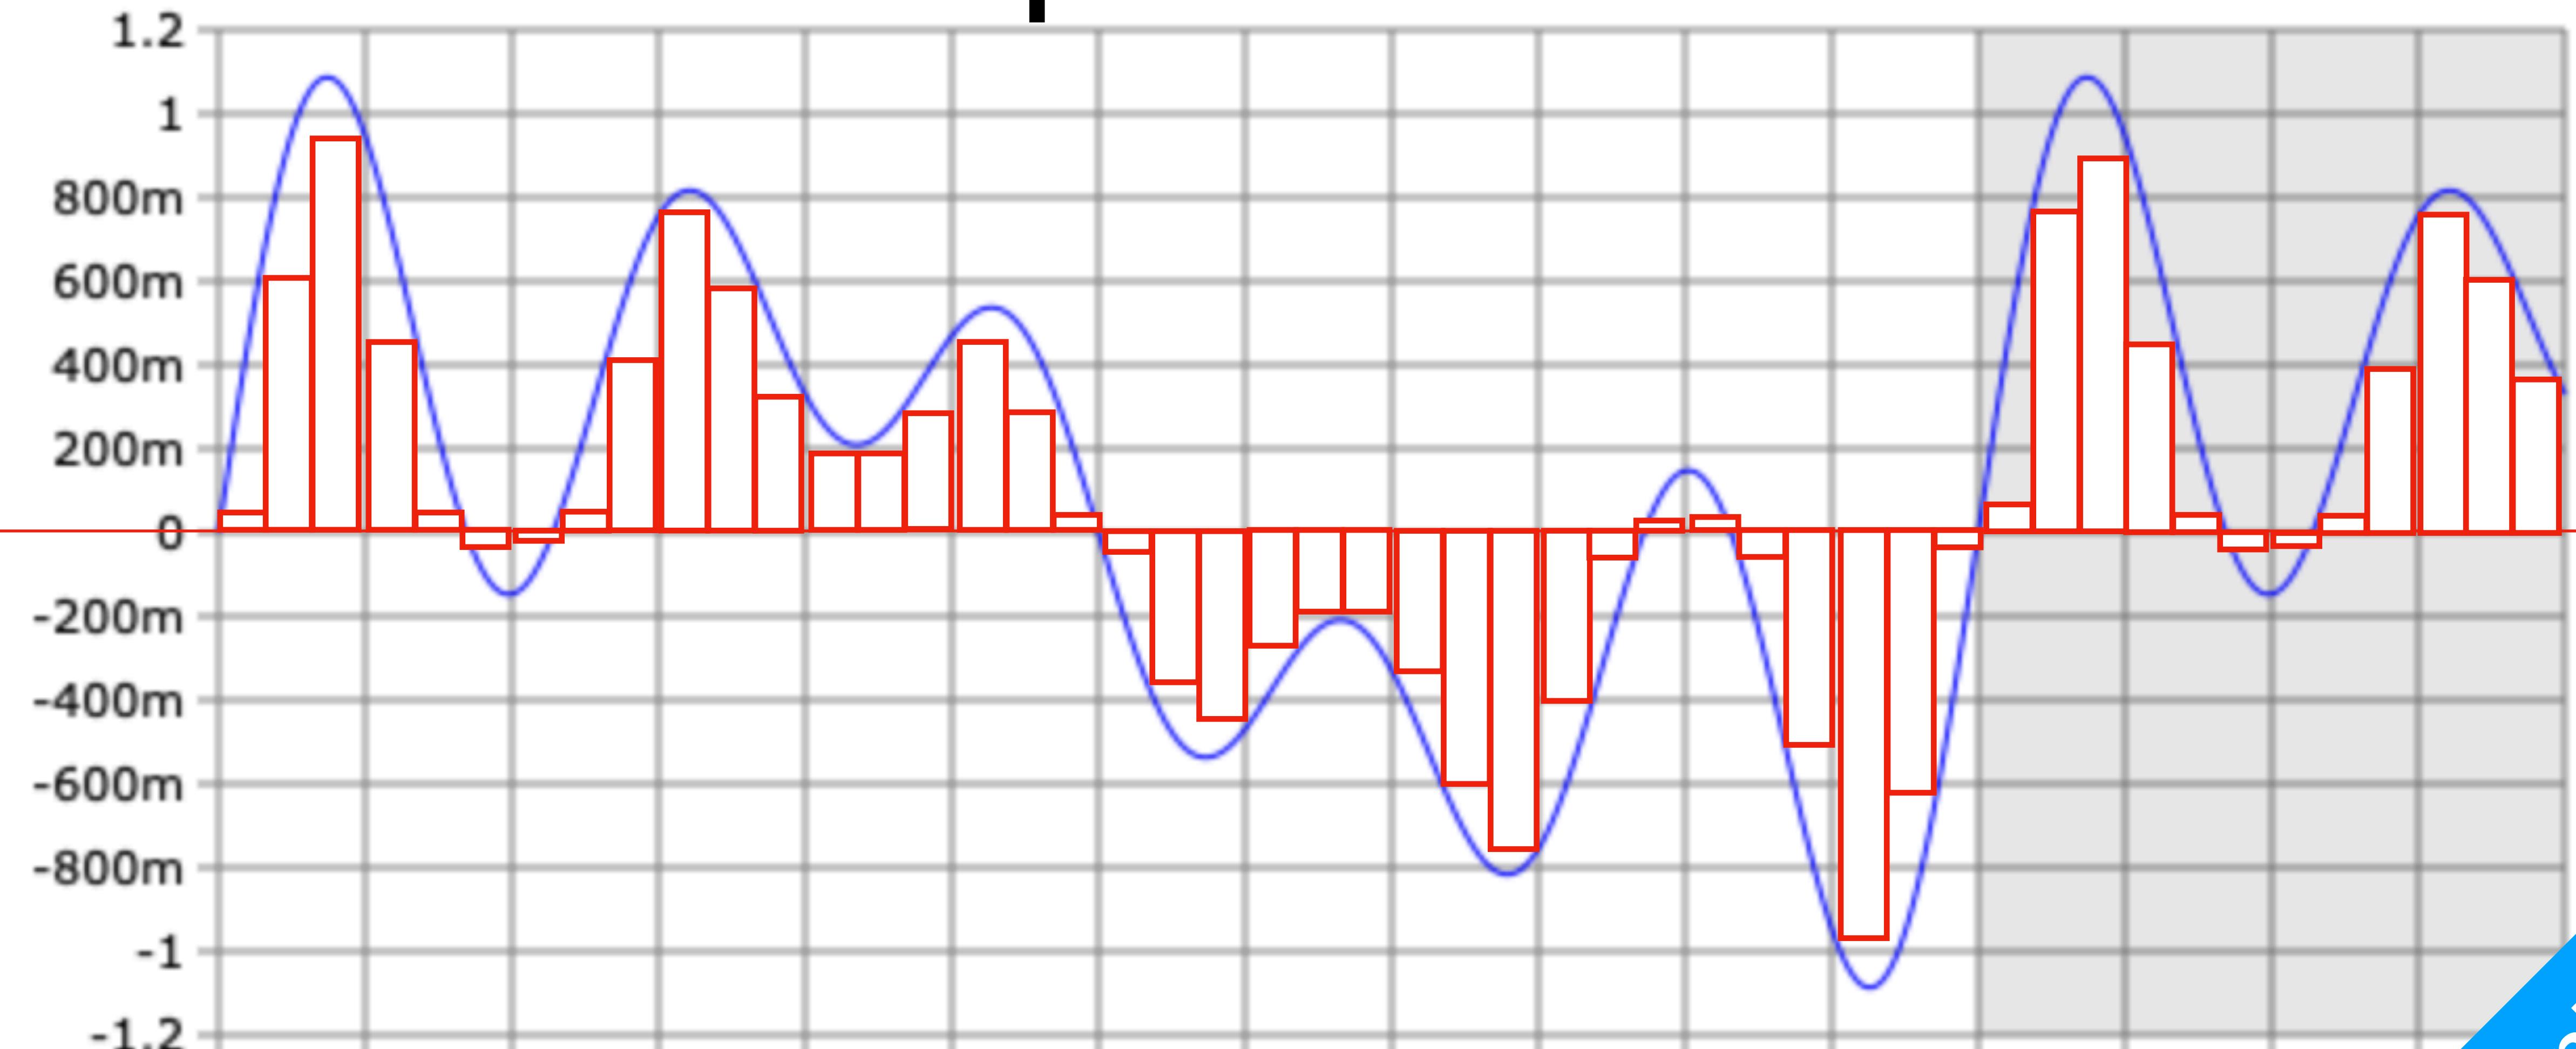

440 Hz = 440 cycles per sec, Sample rate 36 x 440 = 15,840 = 16kps

Technical

Case Study: Audio Signal Representation

P3

DA Conversion

Signed 16bit: '1000000011001000'

$$=(-11001000)_2$$

-200m

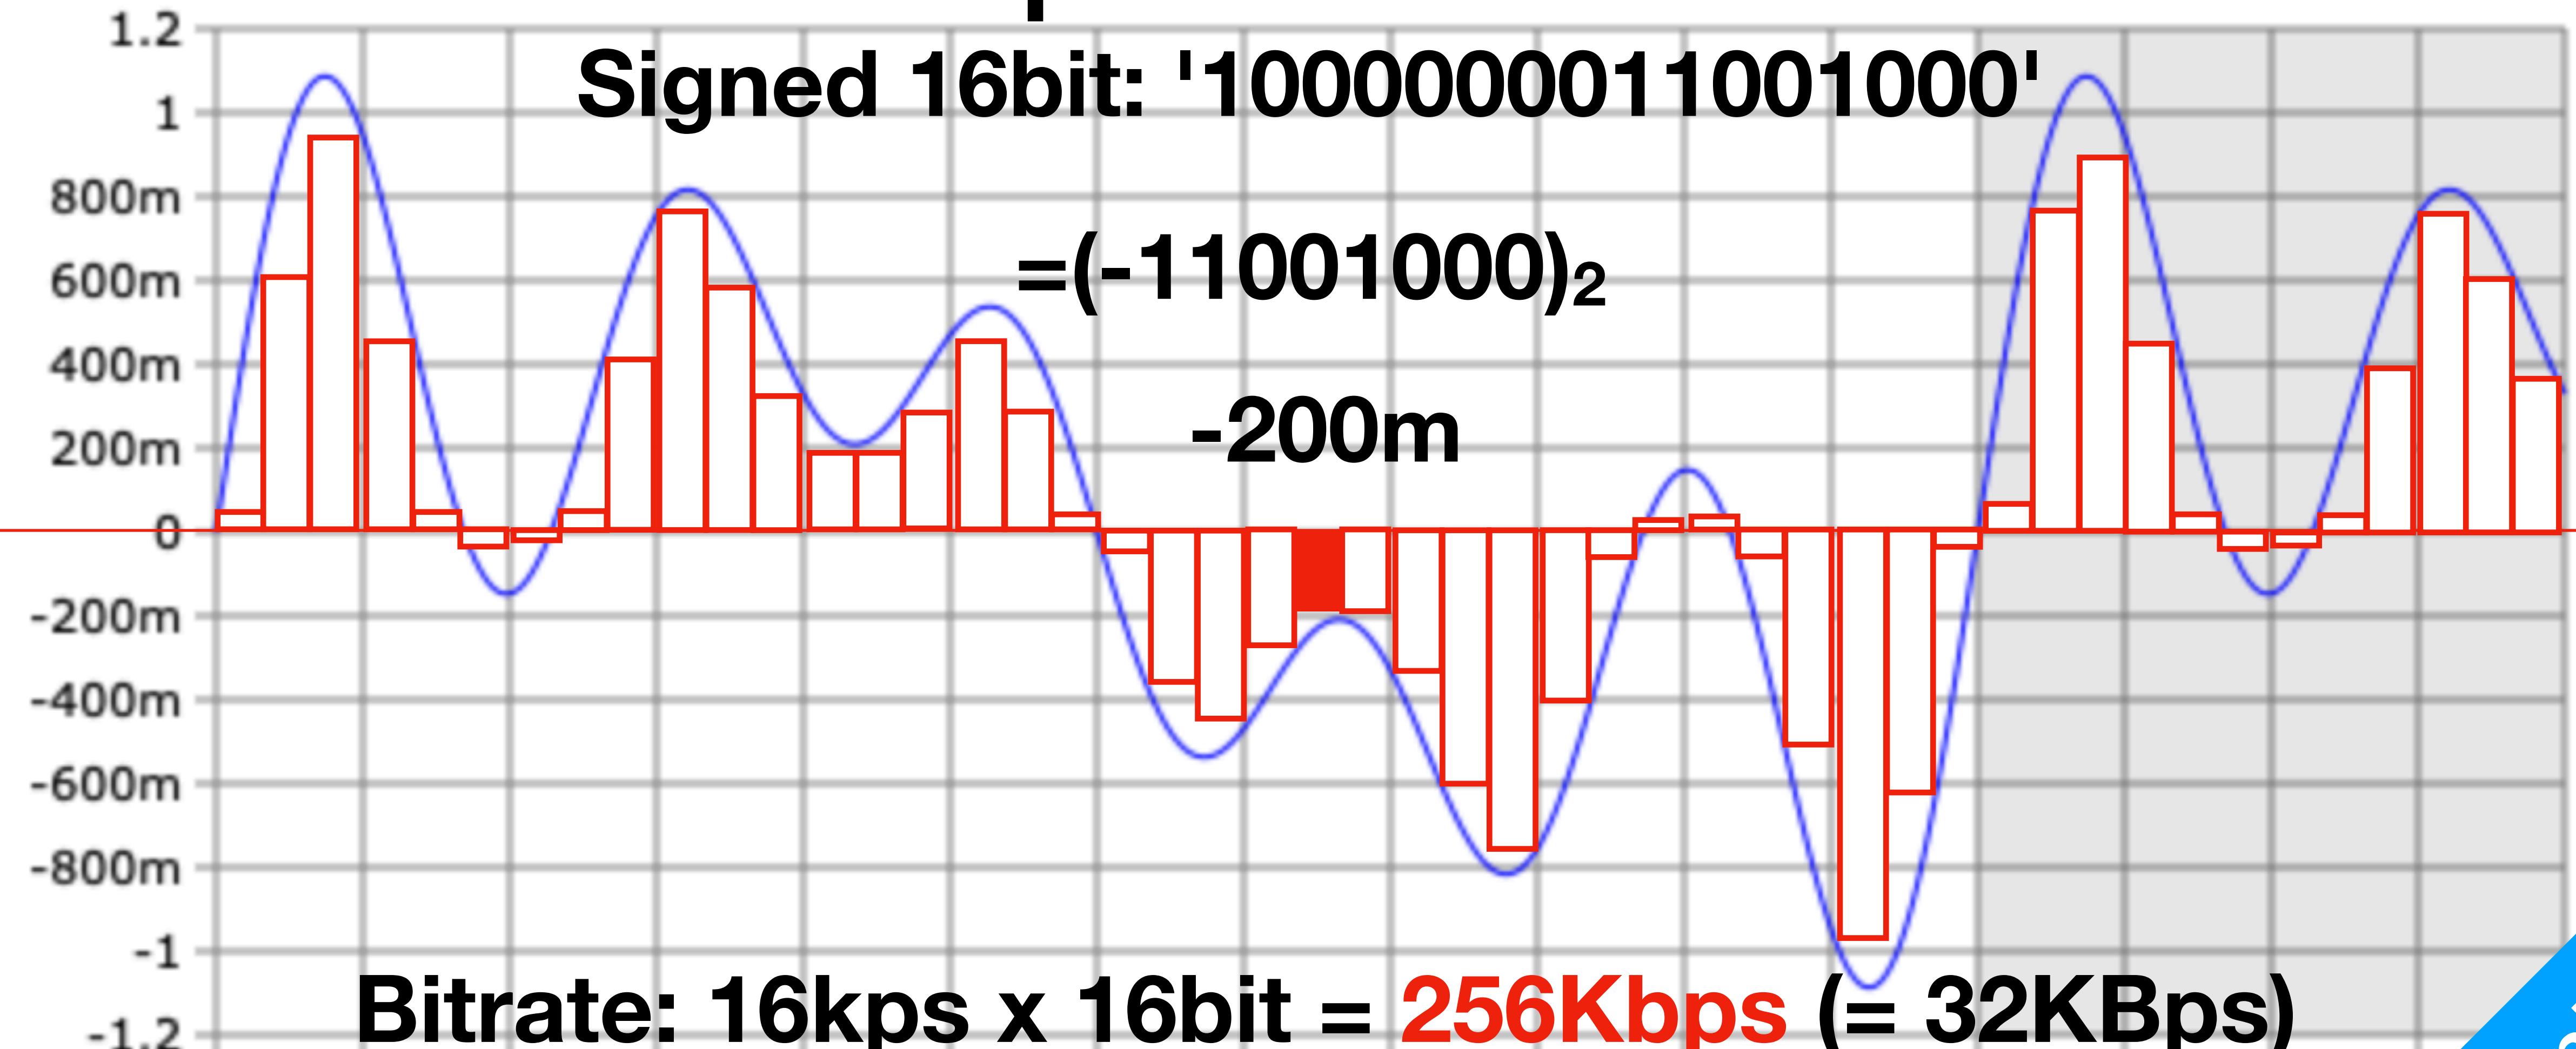

440 Hz = 440 cycles per sec, Sample rate 36 x 440 = 15,840 = 16kps

Technical

Case Study: Audio Signal Representation

P3
DA Conversion

440 Hz = 440 cycles per sec, Sample rate 36 x 440 = 15,840 = 16kps

Technical

Case Study: Audio Signal Representation

- Standard Mp3 audio file
 - Sampling rate: 44,100
 - Bitrate: 256 kBit/s (Kbps)
 - 4 min audio file size? $> 4 \times 60 \times 256 \div 8 = 7680\text{KB}$

Summary

- Digital to Analog Conversion
 - Frequency: number of cycles per second
 - Sample rate: number of samples per unit time
 - Bitrate: number of bits per second
