Exercise

- Draw the SR Latch in LogicWorks as below, make sure it works as intended

\overline{SR} Latch

- Design similar to SR latches, but with NANDS
- Functions equivalent to SR latches with S and R inverted

D Latch

C	D	Next state of Q
0	X	No change
1	0	Q = 0; Reset state
1	1	Q = 1; Set state

- Implemented using \overline{SR} latches
- *C*: Signals changes to the stored states; *D* the value to change to

Latches

- Implement \overline{SR} latch, save as a component in your library
- Implement D latch, save as a component in your library
