

# CSCI 101

## Connecting with Computer Science

### Lecture 2: Introduction to WWW I

Jetic Gū  
2023 Fall Semester (S3)

# Overview

- Focus: Internet
- Architecture: von Neumann
- Readings: 1
- Core Ideas:
  1. History
  2. Constructions/Infrastructures
  3. Things to Think about

# History of the Internet

1. <https://www.youtube.com/watch?v=9hIQjrMHTv4>

# History

- 1969 ARPANET
  - University of Utah with three research centres in California
  - A prototype to test the concept of **packet switching**

# Packet Switching

A

B

C

Example

# Packet Switching

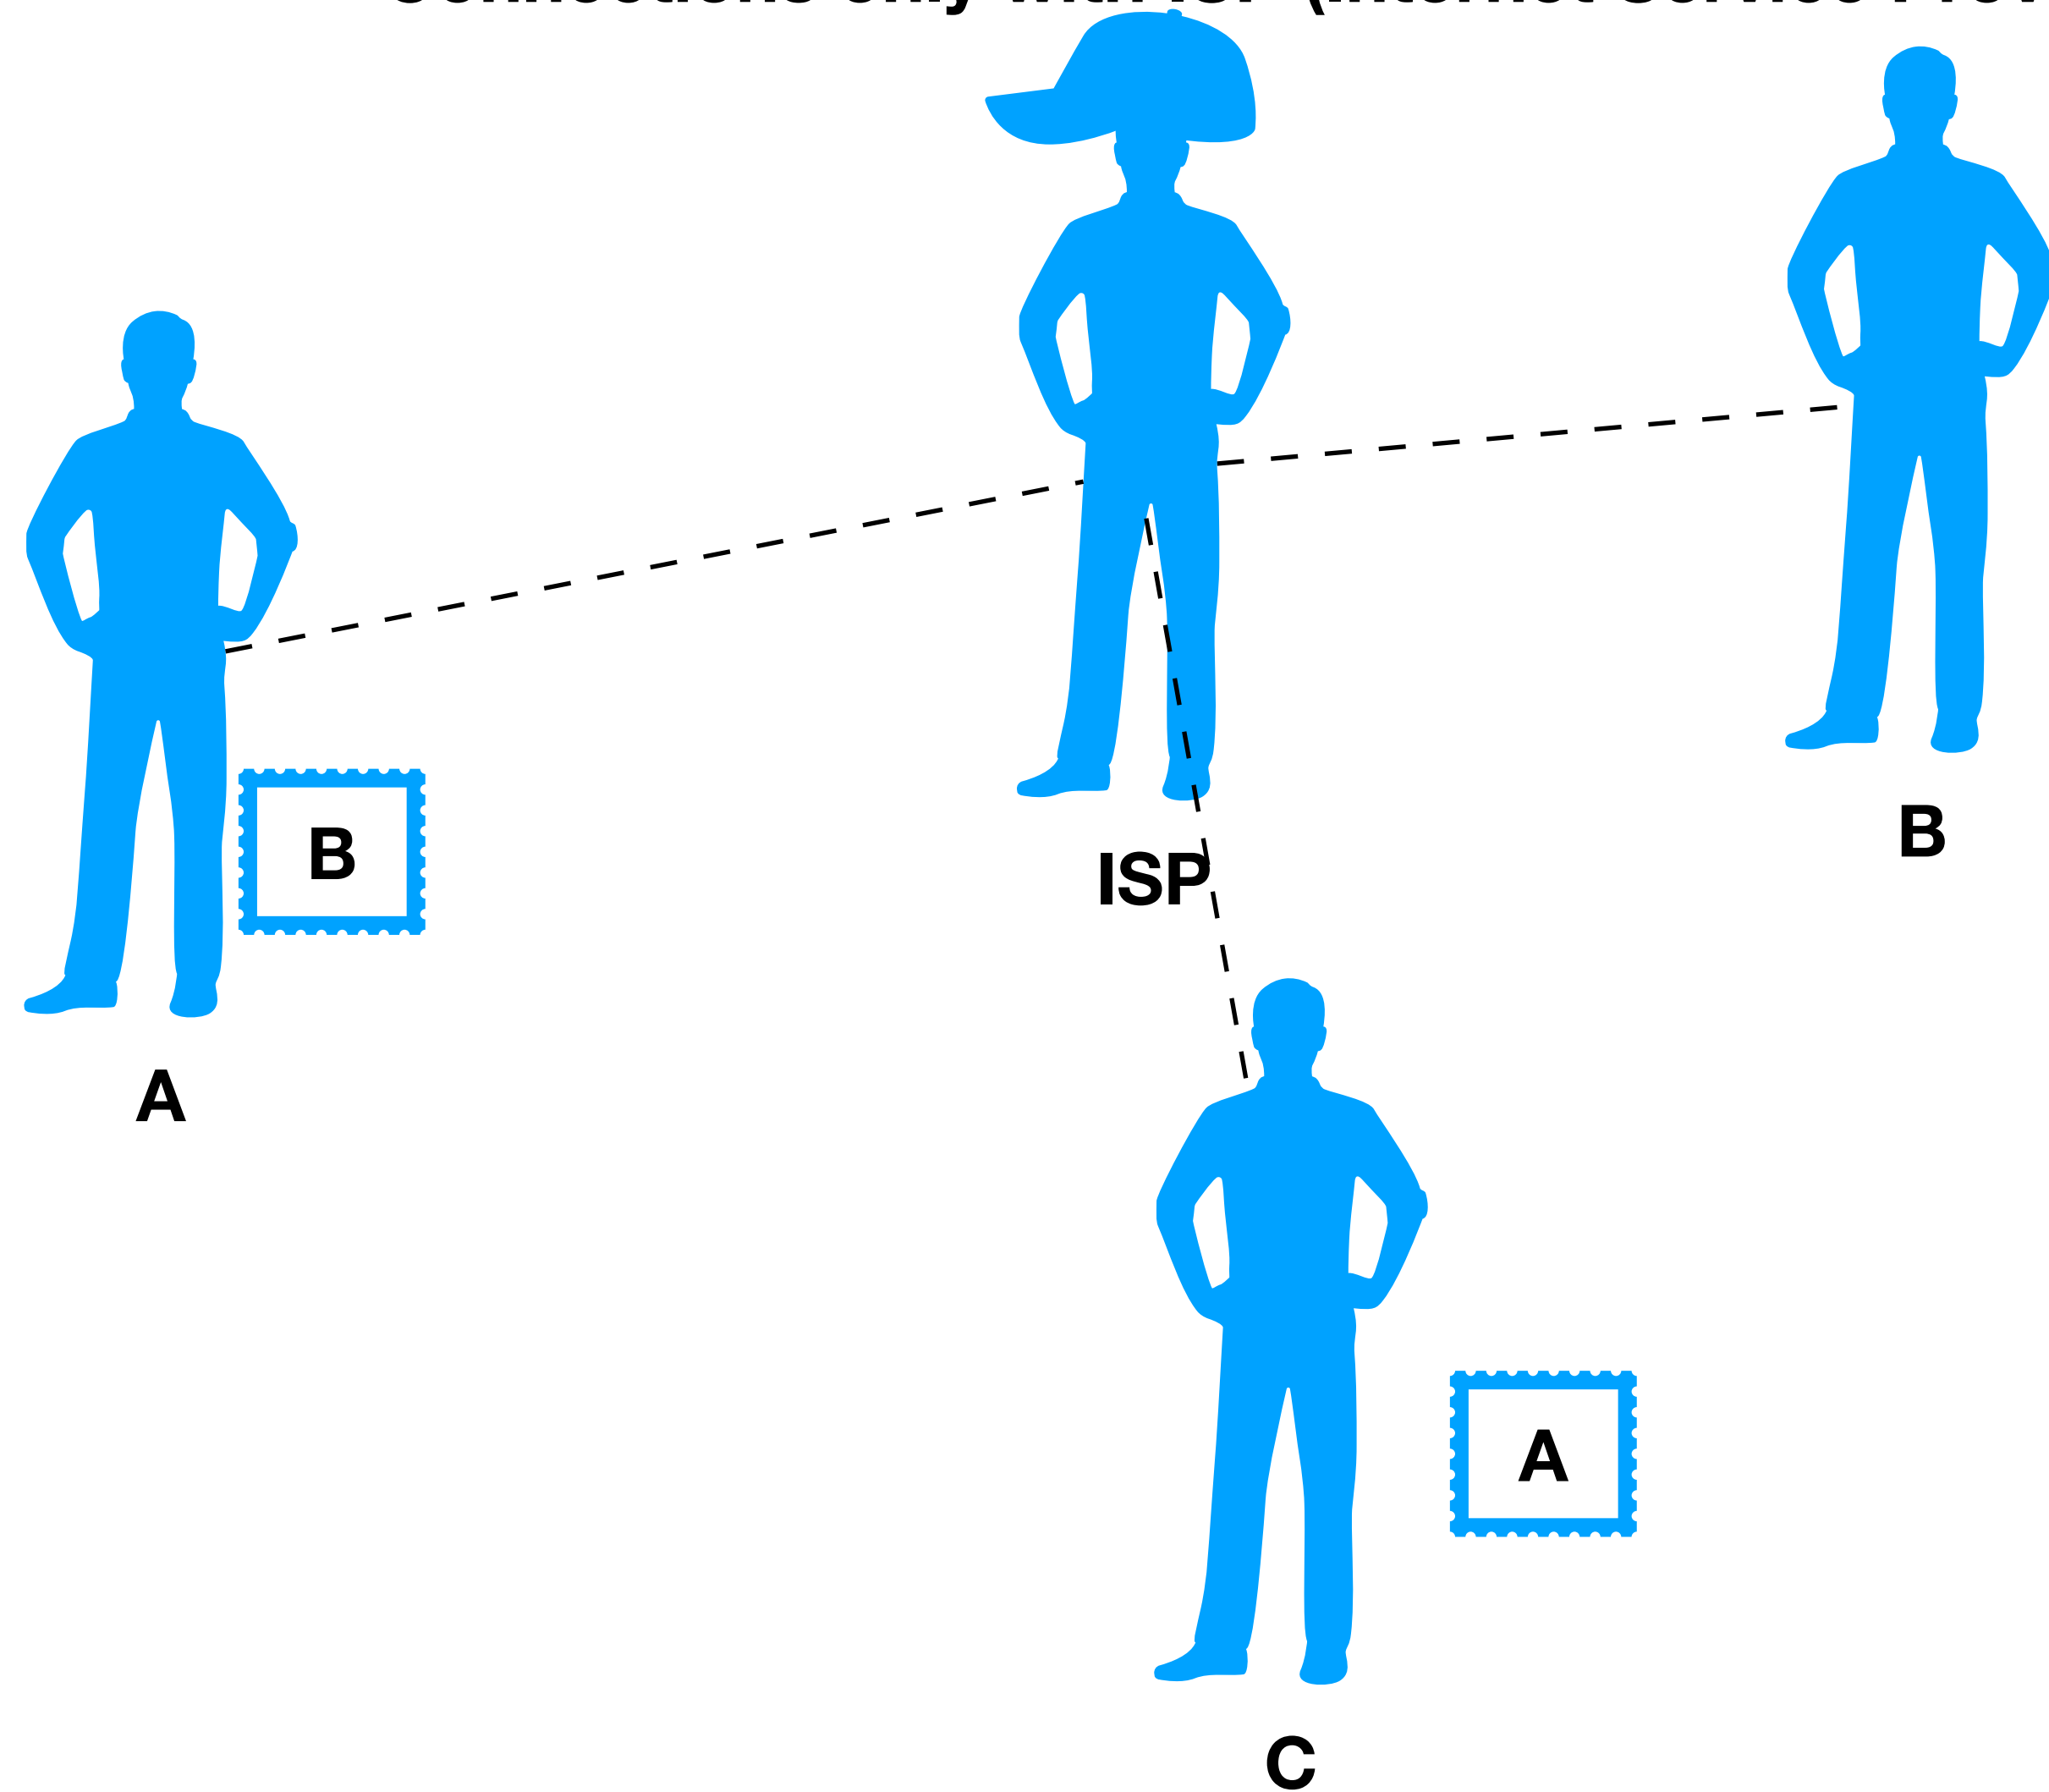

Connections between each pair of people

Example

# Packet Switching

Connections only with ISP (Internet Service Provider)

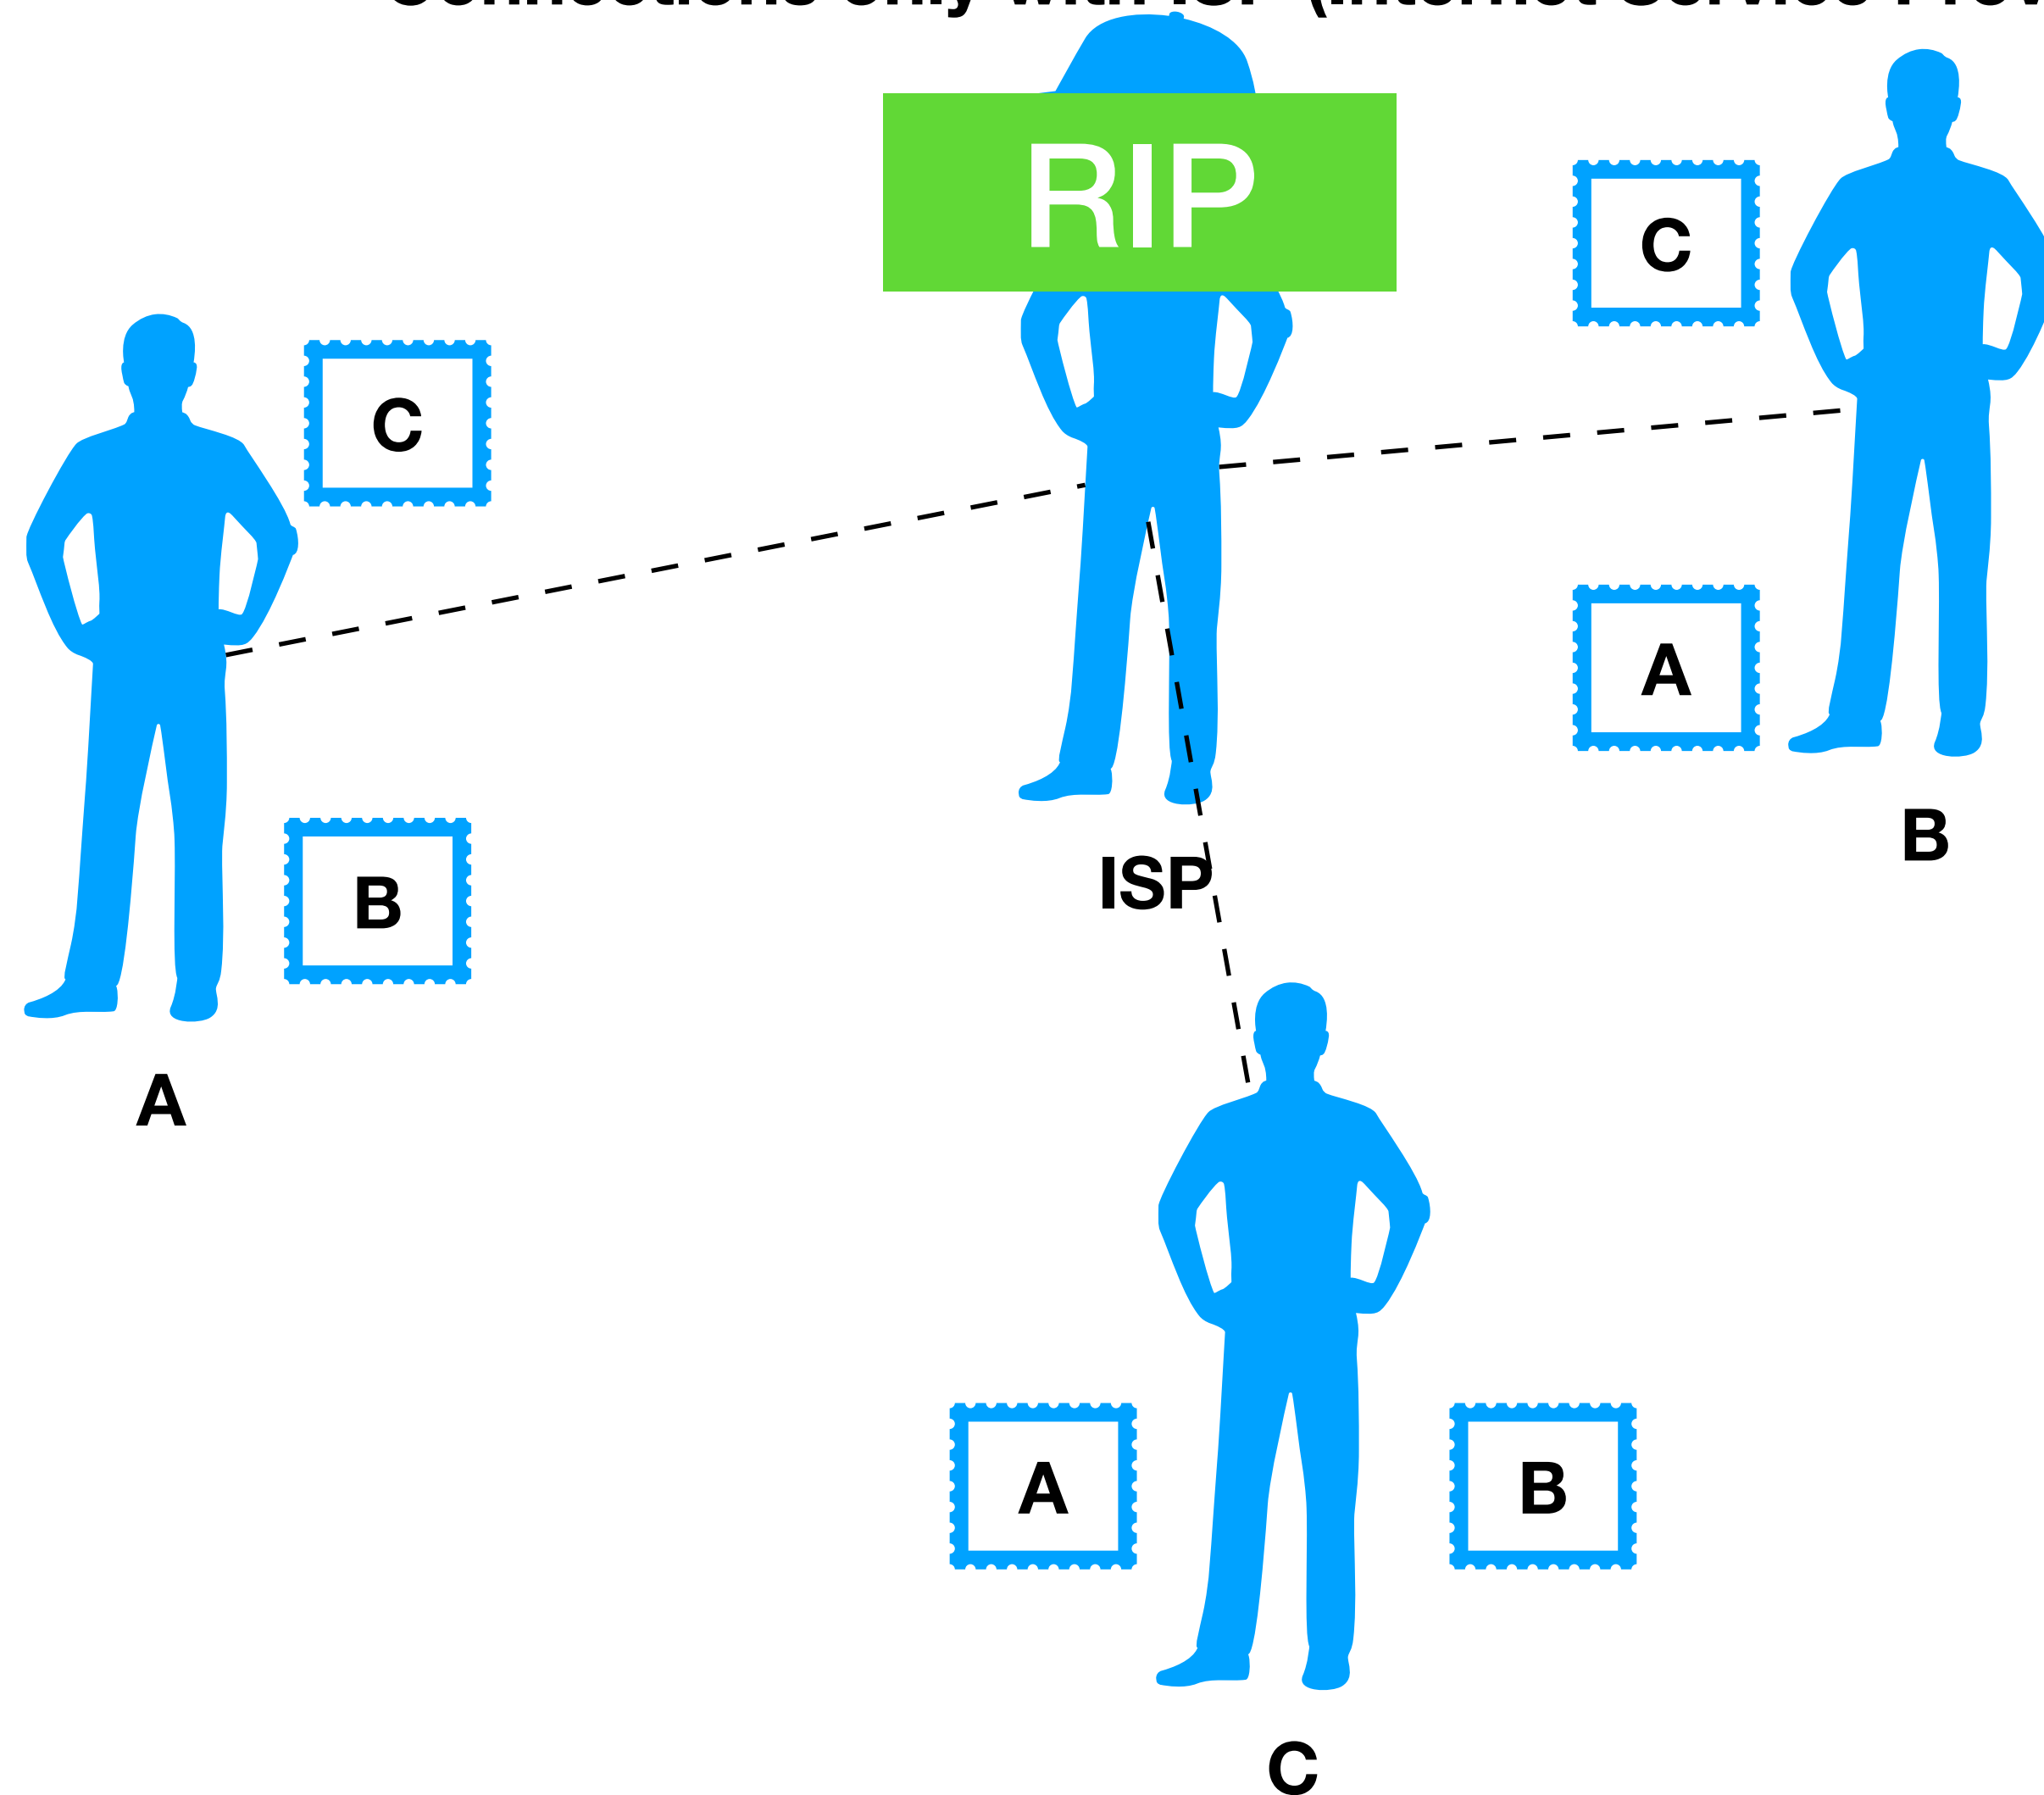

Example

# Packet Switching

Connections only with ISP (Internet Service Provider)

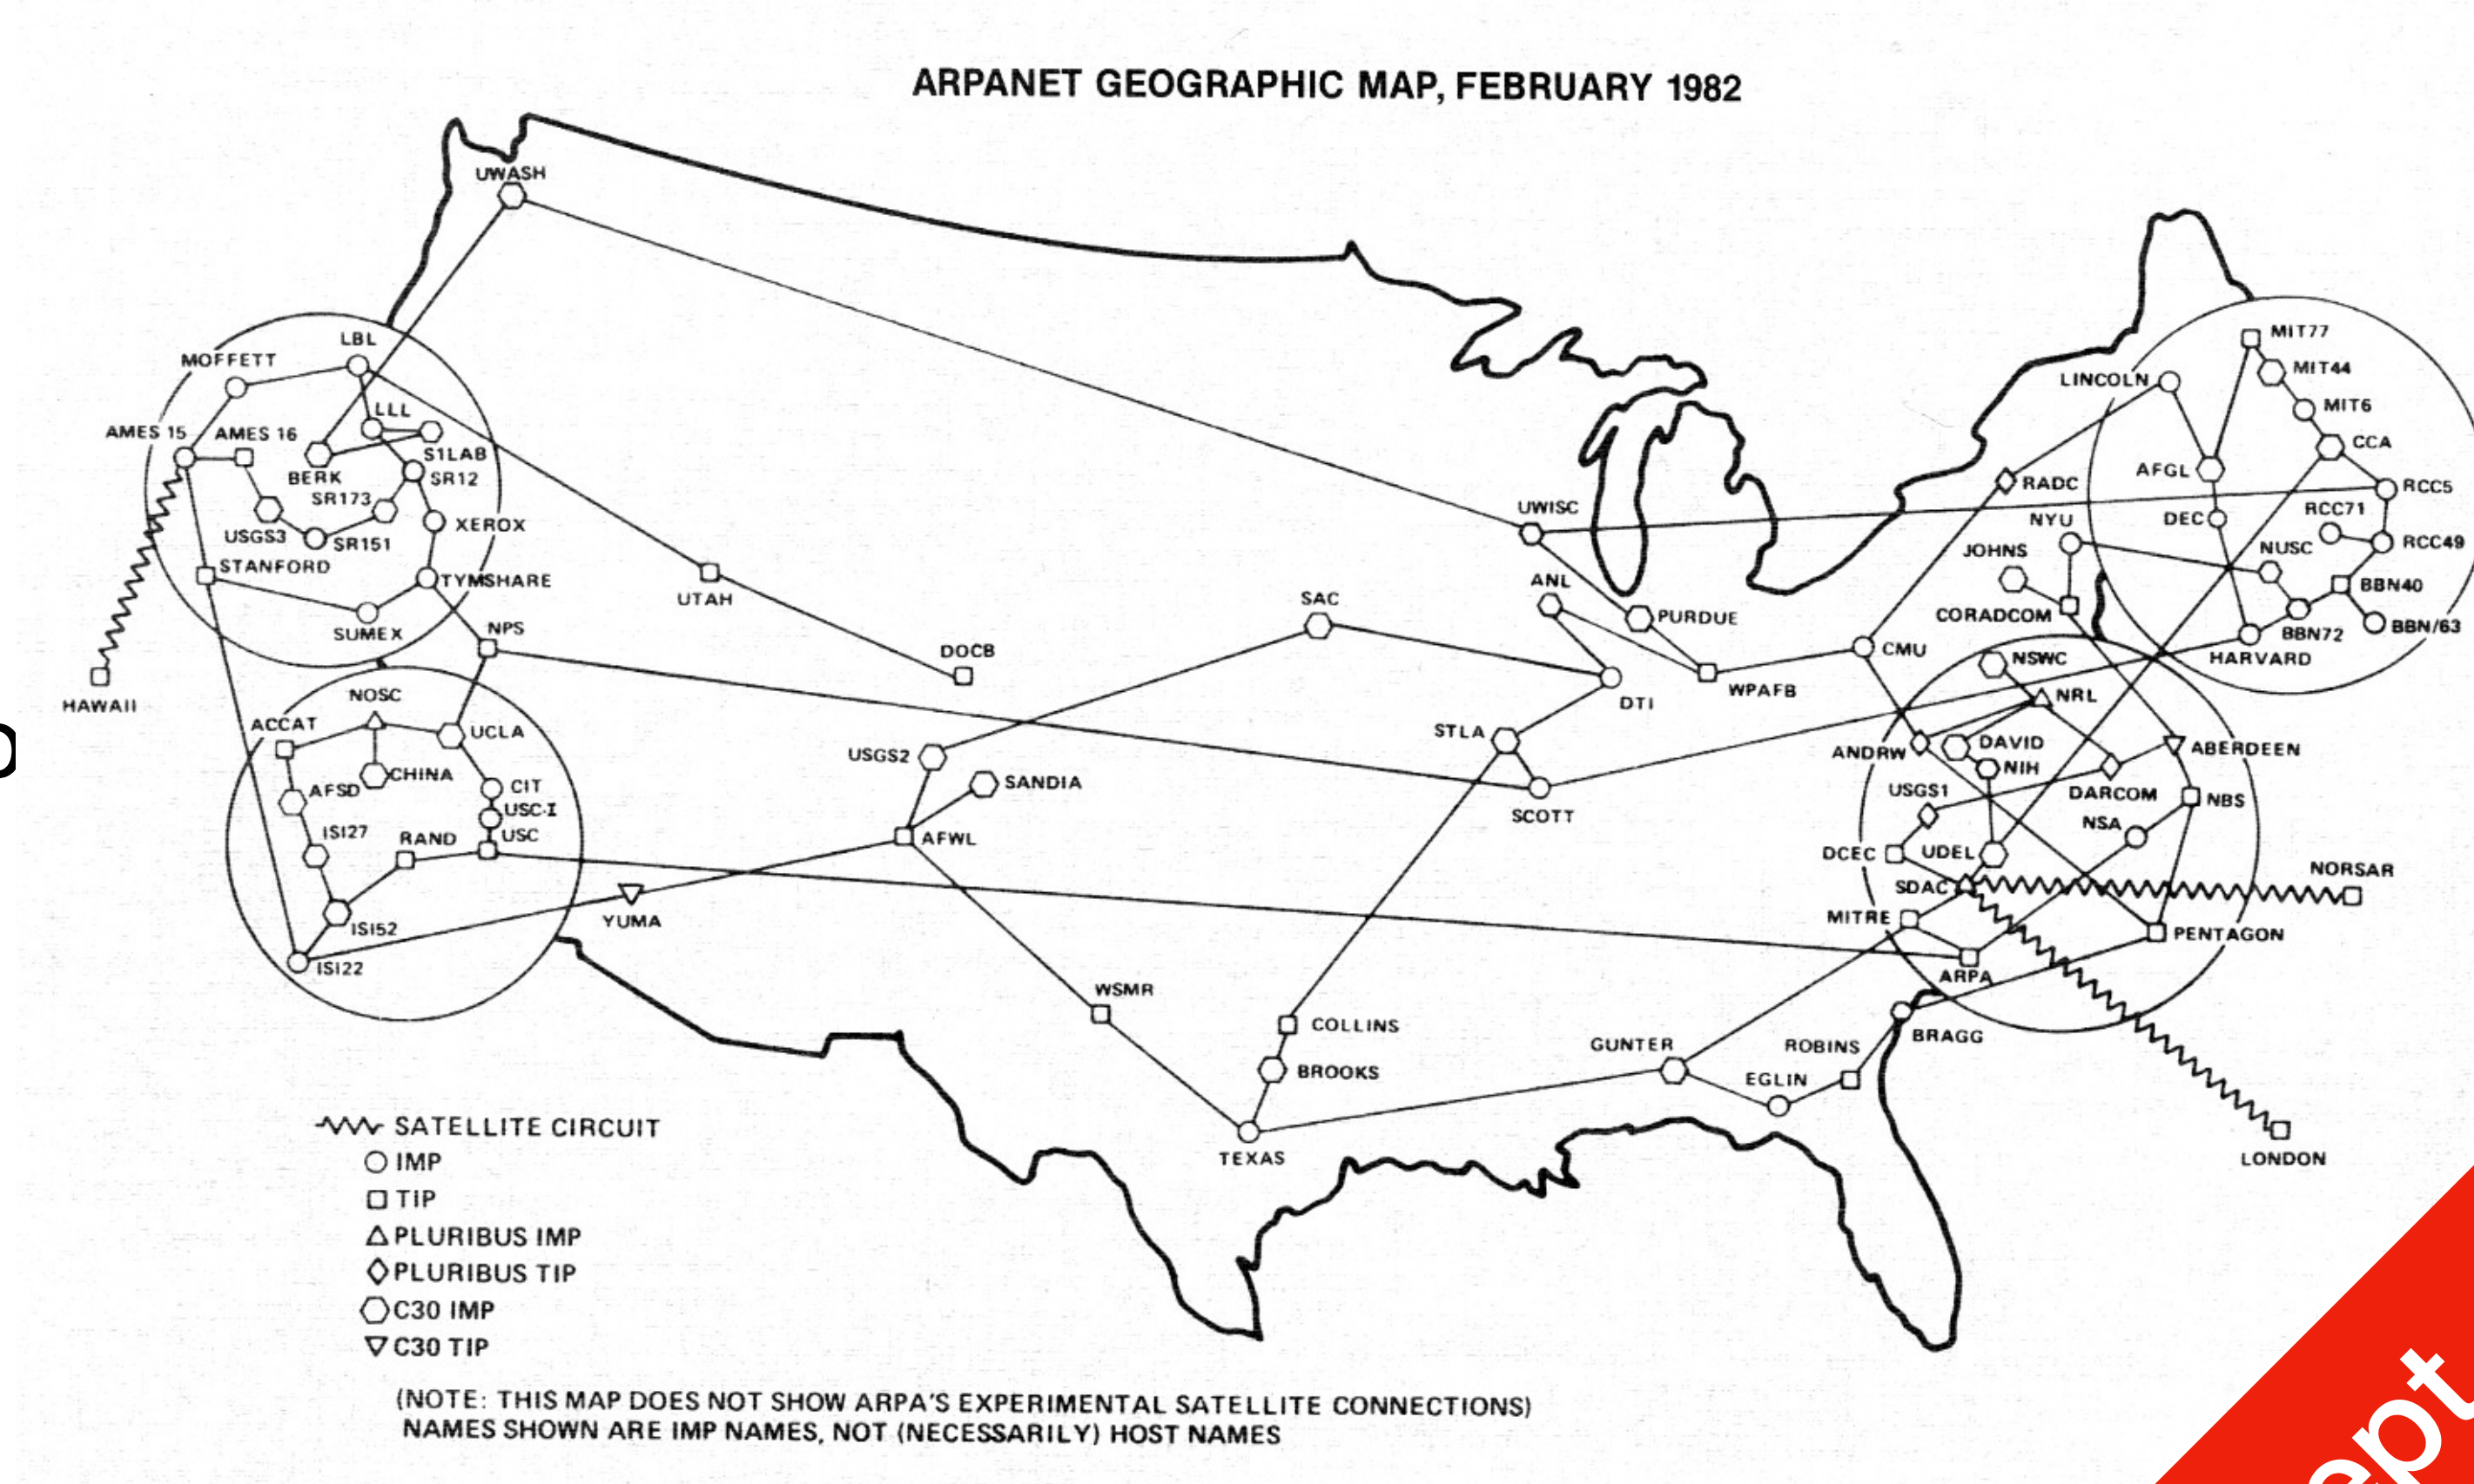

Packet: data, information

Packet switching:  
Too many packets arrive at the  
same time, how to handle it?

Example

# History

- 1969 ARPANET
- University of Utah with three research centres in California
- A prototype to test the concept **packet switching**
- **1982: international**
- **1994: privatisation of internet**

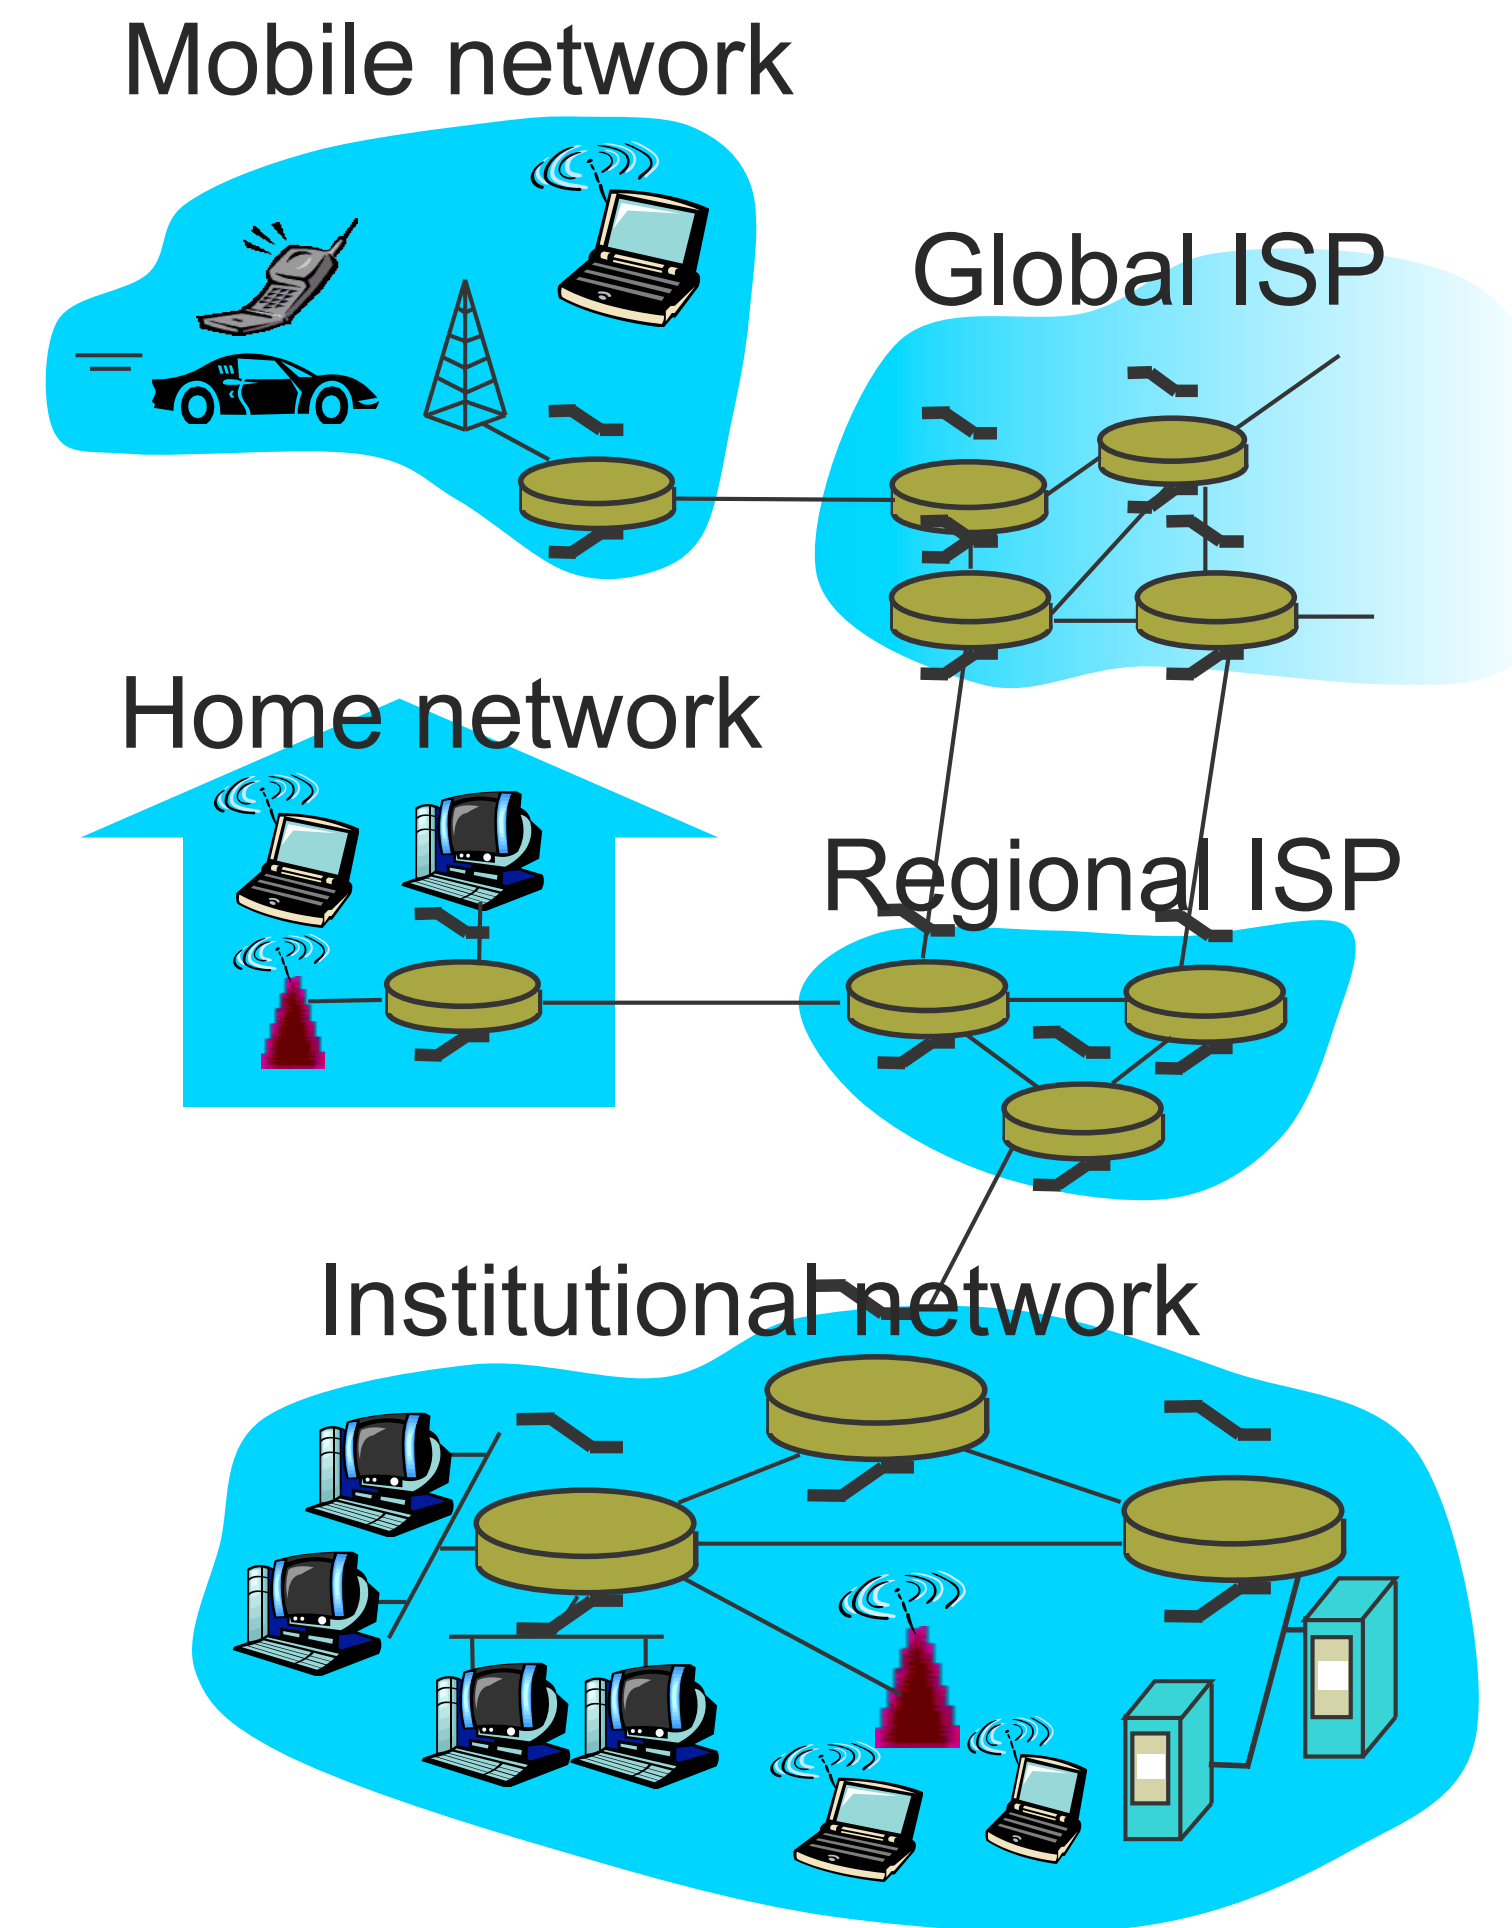

Concept

# Constructions/ Infrastructures

# Communication Infrastructure

- ISP: Internet Service Provider
  - Provide connections to end-users and access to sub-networks
- Mobile network
  - 3G, 4G LTE, 5G, satlink, etc.

# Essence: Delivery Business

- The essence of internet is **Packet Delivery**
  - Transfer data between end systems
  - Each packet is a fixed size data block
  - Packet delivery services depends on the protocol
    - Best effort (ASAP but unreliable, most common)
    - Reliable data delivery: reserved for critical services

# Network Architecture

- Very very very complicated, so complicated that I can promise you you cannot remember after I tell you
- So I am not gonna tell you (a lot)

# Multiple layers of hardware and software

- Physical (e.g. cable, RJ45)
- Data Link (e.g. MAC, switches)
- Network (e.g. IP, routers)
- Transport (e.g. TCP, UDP, port numbers)
- Session (e.g. Syn/Ack)
- Presentation (e.g. encryption, ASCII, PNG, MIDI)
- Application (e.g. SNMP, HTTP, FTP)

# Multiple layers of hardware and software

- Physical (e.g. cable, RJ45)

- Data Link (e.g. MAC, switches)

- Network (e.g. IP, routers)

- Transport (e.g. TCP, UDP, port numbers)

- Session (e.g. Syn/Ack)

- Presentation (e.g. encryption, ASCII, PNG, MIDI)

- Application (e.g. SNMP, HTTP, FTP)

**You are agnostic**

# Brilliance

- What make the internet such an amazing technology?
- Your average user don't know how complicated it is
- Most professional IT people don't know how complicated it is

# The Evolution of Human Race in Age of Internet

# What makes the Internet Different?

- We know the internet is all about delivering information
- What makes it different from the other technology?

# Important Technologies

- Letters
  - + Distant communications, through text
- Telegram
  - + Fast communications, through text (but not instant)
- Telephone
  - + Acoustics, instantaneous

# Important Technologies

- Televisions
  - + Video, Age of brand new medium
- Videoconferencing
  - + Instantaneous video
  - + Virtual presence

**What makes the Internet so  
revolutionary?**

# What makes the Internet so revolutionary?

- Automation
- Detachment
- Untraceable

# Automation

- Service Automation

- Medium Automation

# Automation

- Manufacturing cost for fashion brands like Zara is 5% of their retail prices
- Most spendings are online advertisement
- 90% of sales for a small Café in central China comes from online delivery order
- Cost of a single ad by an influencer in China: (ByteDance, up to 50K CAD)
- Online job seekers: 100 resumes a day, for a barista position on E Hasting st
- Eventually, the owner hired two people how came physically to the shop and dropped off resume

Think

# Automation

- Media consumption

- How many hours do you spend on social media? 
- Have you tried blogging / vlogging?
- When is the last time you went for something NOT given by an automated recommendation system?
- Why do you go to the theatre instead of Netflix?
- When is the last time you picked up a book and read? (including eBooks)

# Detachment

- Are instant messages really instant? 
- Polarised public opinions  
Is internet encouraging free speech or censoring it? 
- Service detachment  
"Inhumane" automation of services 

# Detachment

- Have you gone out a day without internet?
- How frequent do you check your phone?
- When's the last time you ate with friends WITHOUT ever checking your smartphone?
- Have you ever broken up with someone over SMS/Social Media?
- Have you ever had "read but no reply"?
- How often do conversations start/end with memes?

Think

# Detachment

- Do you make your own choices?
- Do you really make your own choices?  
Think about the bad things you've heard about Trump and Joe Biden. Are those sources really reliable?
- What do you think about Political Correctness?
- What do you think about the Sino-Indian conflicts in recent days?

Think

# Detachment

- Have you tried Fido's customer service?
- What do you think about online counselling?
- Ever heard of Salesforce? 
- What do you think about online education? 

Think

# Untraceable

- Blockchain and Cryptocurrencies 
- Cyberbullying and Privacy 
- Darknet 

# The Evolution of Human Race in Age of Internet

- What has the internet changed?
  - The way we live
    - interact with family and friends, entertain, eat, and travel
  - The way we work
    - Online businesses
    - Intelligent business systems
  - The way we die

# The Evolution of Human Race in Age of Internet

- Internet is a tool.
- DO NOT BE USED BY A TOOL.
