Jetic Gū

Columbia College

This assignment is an individual work.

You are required to utilise basic HTML to write a small webpage containing your answer to the following questions. If you ever get stuck, I recommend: https://www.w3schools.com/html/default.asp

You must make sufficient effort to ensure the submitted webpage is properly formatted. Failure to comply will result in a ZERO grade. You submission must be a zip file with **exactly** following file structure:

```
answer.zip
    index.html
```

The usage of incorrect filenames will result in a grade of 0.

Lab 2

Base your lab 2 on your existing `index.html` from lab 1, continue to add features and make improvements. You are expected to write more about the 4 layers of computer networks, look up more details to add to the page, meanwhile, use the following.

1. Look up `<dl>`, `<dt>`, `<dd>` tags in html tag reference. You will need to find some content to utilise these tags, and add it to your webpage.

2. Look up `<blockquote>` and `<section>` tag in html tag reference. In addition to 4 layers of computer networks, create a new `<section>` and write a bit about the world-wide web in your webpage. In your writing, make sure to include a quote using `<blockquote>`from Tim Berners Lee that's coherent with your writing.

3. Look up `<address>`. In your name/student id section, include a new bit with your email. Make sure when the user clicks on it, the user can start his/her email client to write to you.

4. In your writing, include a relevant image. You will need to use a URL from the internet, or if you are using your own, please ensure when I unzip your submission the image can be correctly displayed.

5. Grading

    1. You may present your work to me in class to receive your grade immediately on Fridays.

    2. You must always upload the final zip file onto moodle, even if you present in person.
