Jetic Gū

Columbia College

Please remember to include your name and student number.

You are required to utilise basic HTML and CSS to write a small webpage containing your answer to the following questions.

You must make sufficient effort to ensure the submitted webpage is properly formatted. Failure to comply will result in a ZERO grade. You submission must be a zip file with the following file structure:

```
answer.zip
    index.html
    style.css
```

Lab 4

In this lab, you are to correct an HTML webpage submitted by a student named Ug Citej. Download this zip file: https://jetic.org/wp-content/uploads/2024/02/04-2024-1002-204_Lab4.zip, extract all files, and start working on it.

1. Use an HTML validator to find out what's wrong with `index.html`, and fix these issues. You can choose any HTML validator online.

2. You'll notice that `index.html` is linking `style.css` wrong. Fix that.

3. Inside `style.css`, do the following:

    1. Centre the `<h2>` with the `text-align` property.

    2. Give the `<h2>` a `background-color`.

    3. Change the font-family for the headings (`<h1>` and `<h2>`) to one of the other generic font families.

    4. Space lines (everywhere in the `<body>`) more by setting the `line-height` to something between 1.2 (which seems to be close to the default) and 2.0: whatever looks nice to you.

    5. Provide a border of some kind to the `<main>` element.

Grading criteria

• Grading will be performed based on 1 factor:

    1. Proper HTML/CSS formatting as per requirements above.
